meę contenderem; Cicero

Lecture No. 1

Introduction

The first lecture of the course is devoted to the study of the history of medicine. It begins with a brief survey of the early civilizations, from the Egyptians to the Greeks, and then proceeds to the Middle Ages and the Renaissance. The lecture concludes with a discussion of the modern scientific approach to medicine.

The second lecture is devoted to the study of the anatomy of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of anatomy in the study of medicine.

The third lecture is devoted to the study of the physiology of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of physiology in the study of medicine.

The fourth lecture is devoted to the study of the pathology of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of pathology in the study of medicine.

The fifth lecture is devoted to the study of the therapeutics of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of therapeutics in the study of medicine.

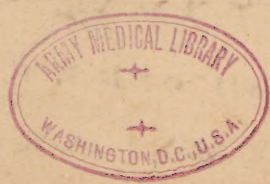

The sixth lecture is devoted to the study of the hygiene of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of hygiene in the study of medicine.

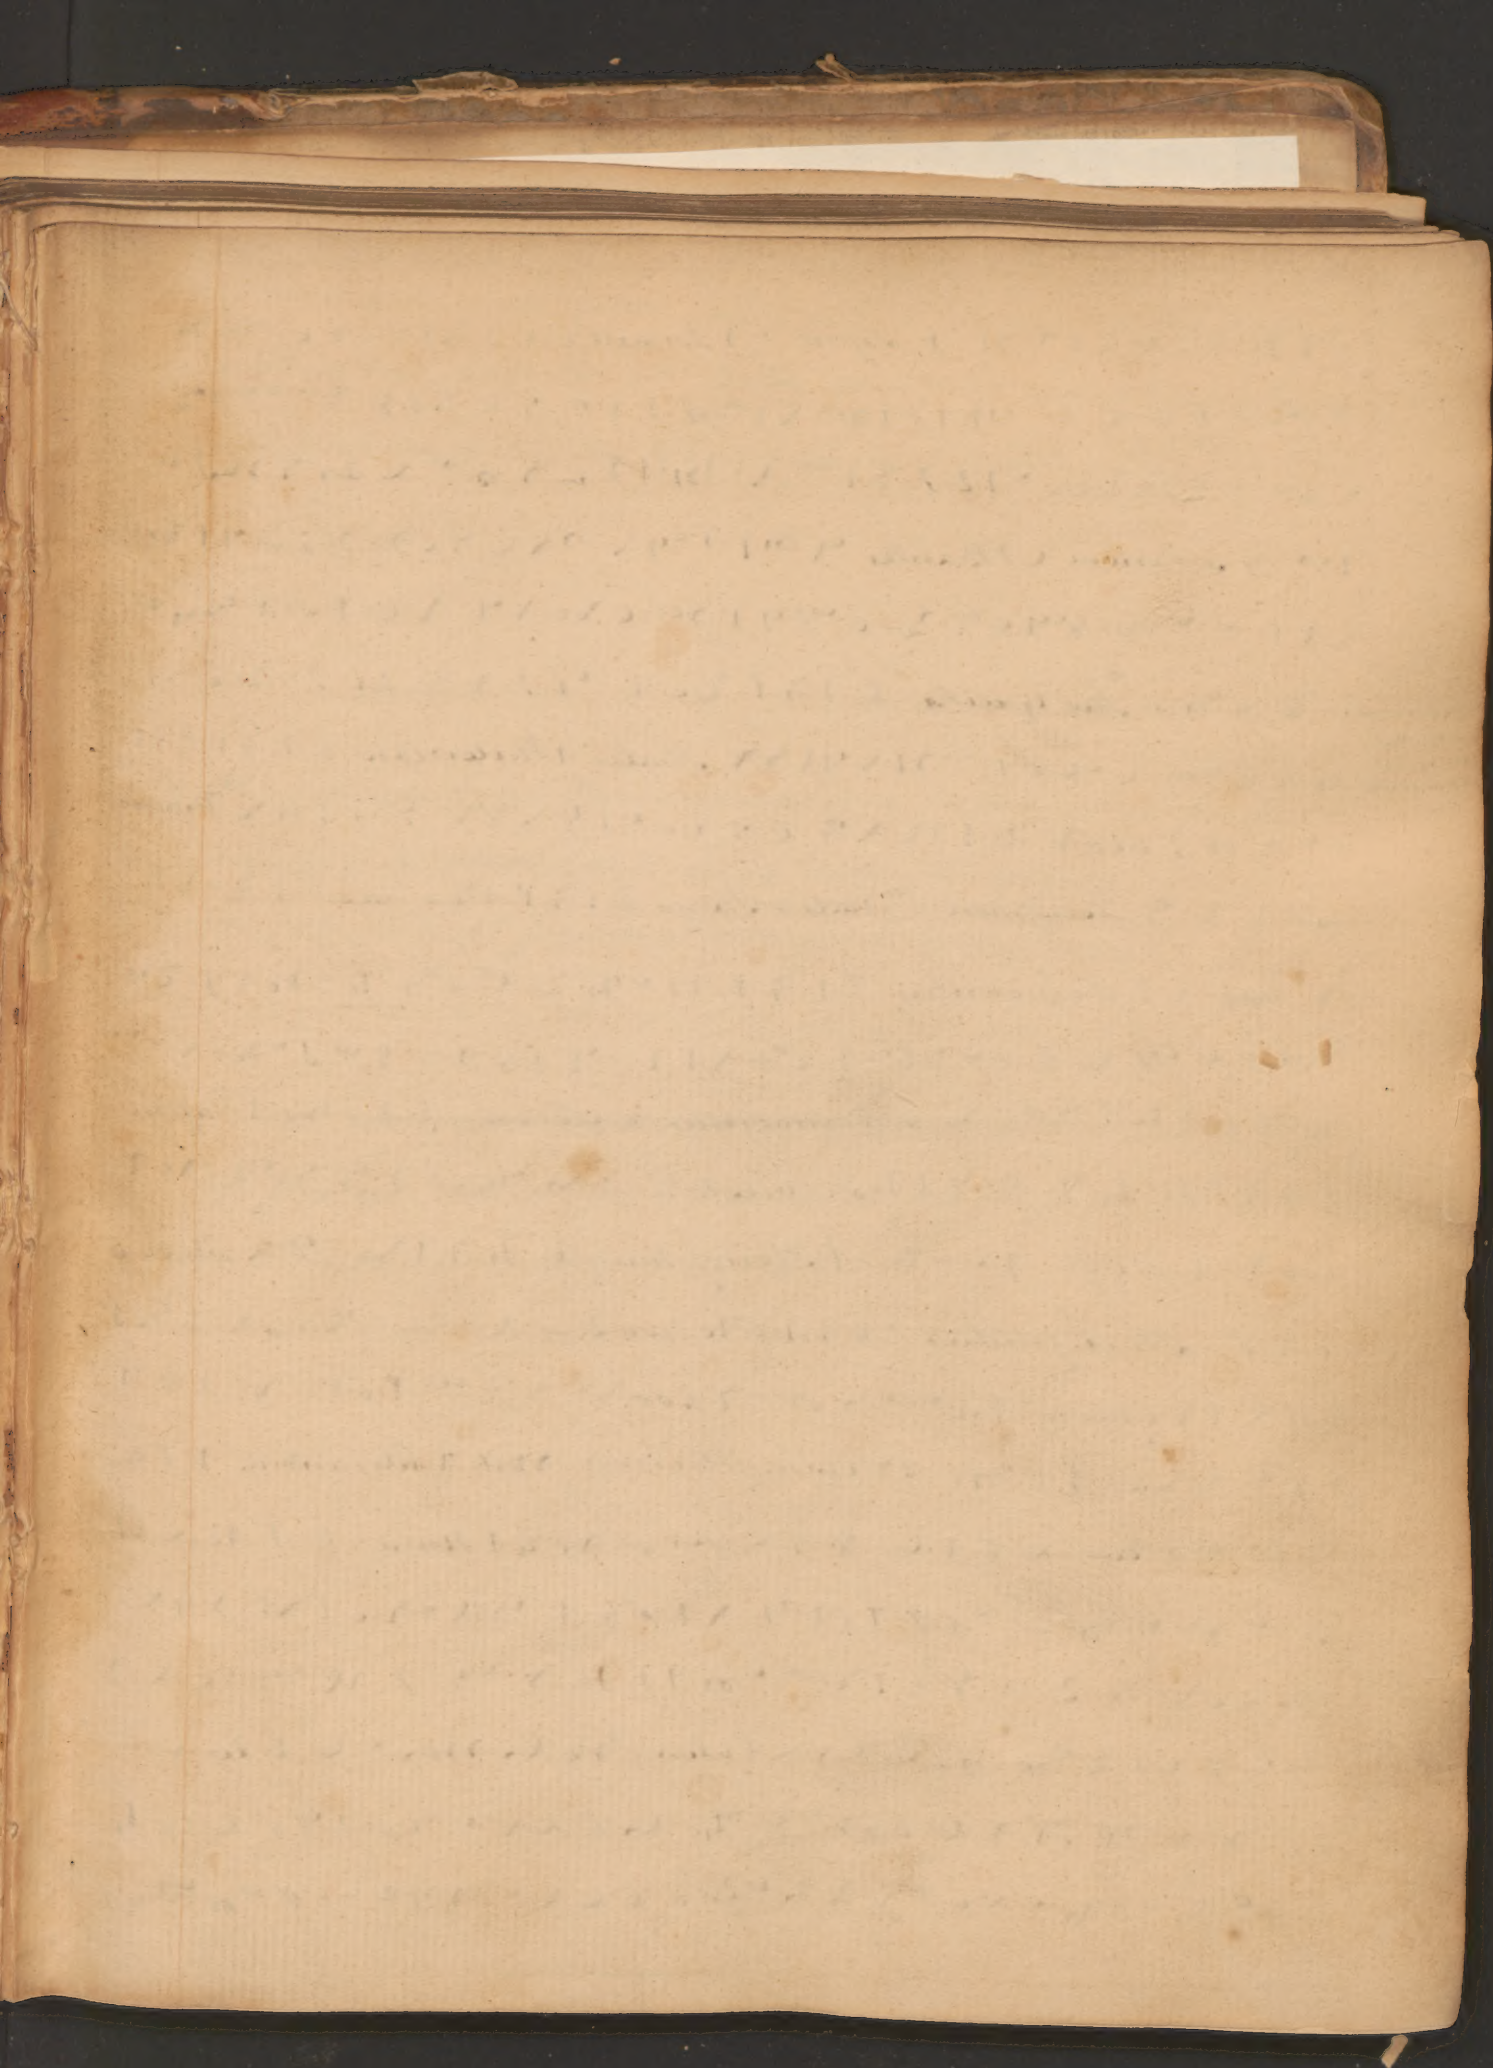

The seventh lecture is devoted to the study of the dietetics of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of dietetics in the study of medicine.

The eighth lecture is devoted to the study of the exercise of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of exercise in the study of medicine.

The ninth lecture is devoted to the study of the sleep of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of sleep in the study of medicine.

The tenth lecture is devoted to the study of the emotions of the human body. It begins with a general survey of the body, and then proceeds to a detailed study of the various organs and systems. The lecture concludes with a discussion of the importance of emotions in the study of medicine.

Lecture 13th
De Ligamentis

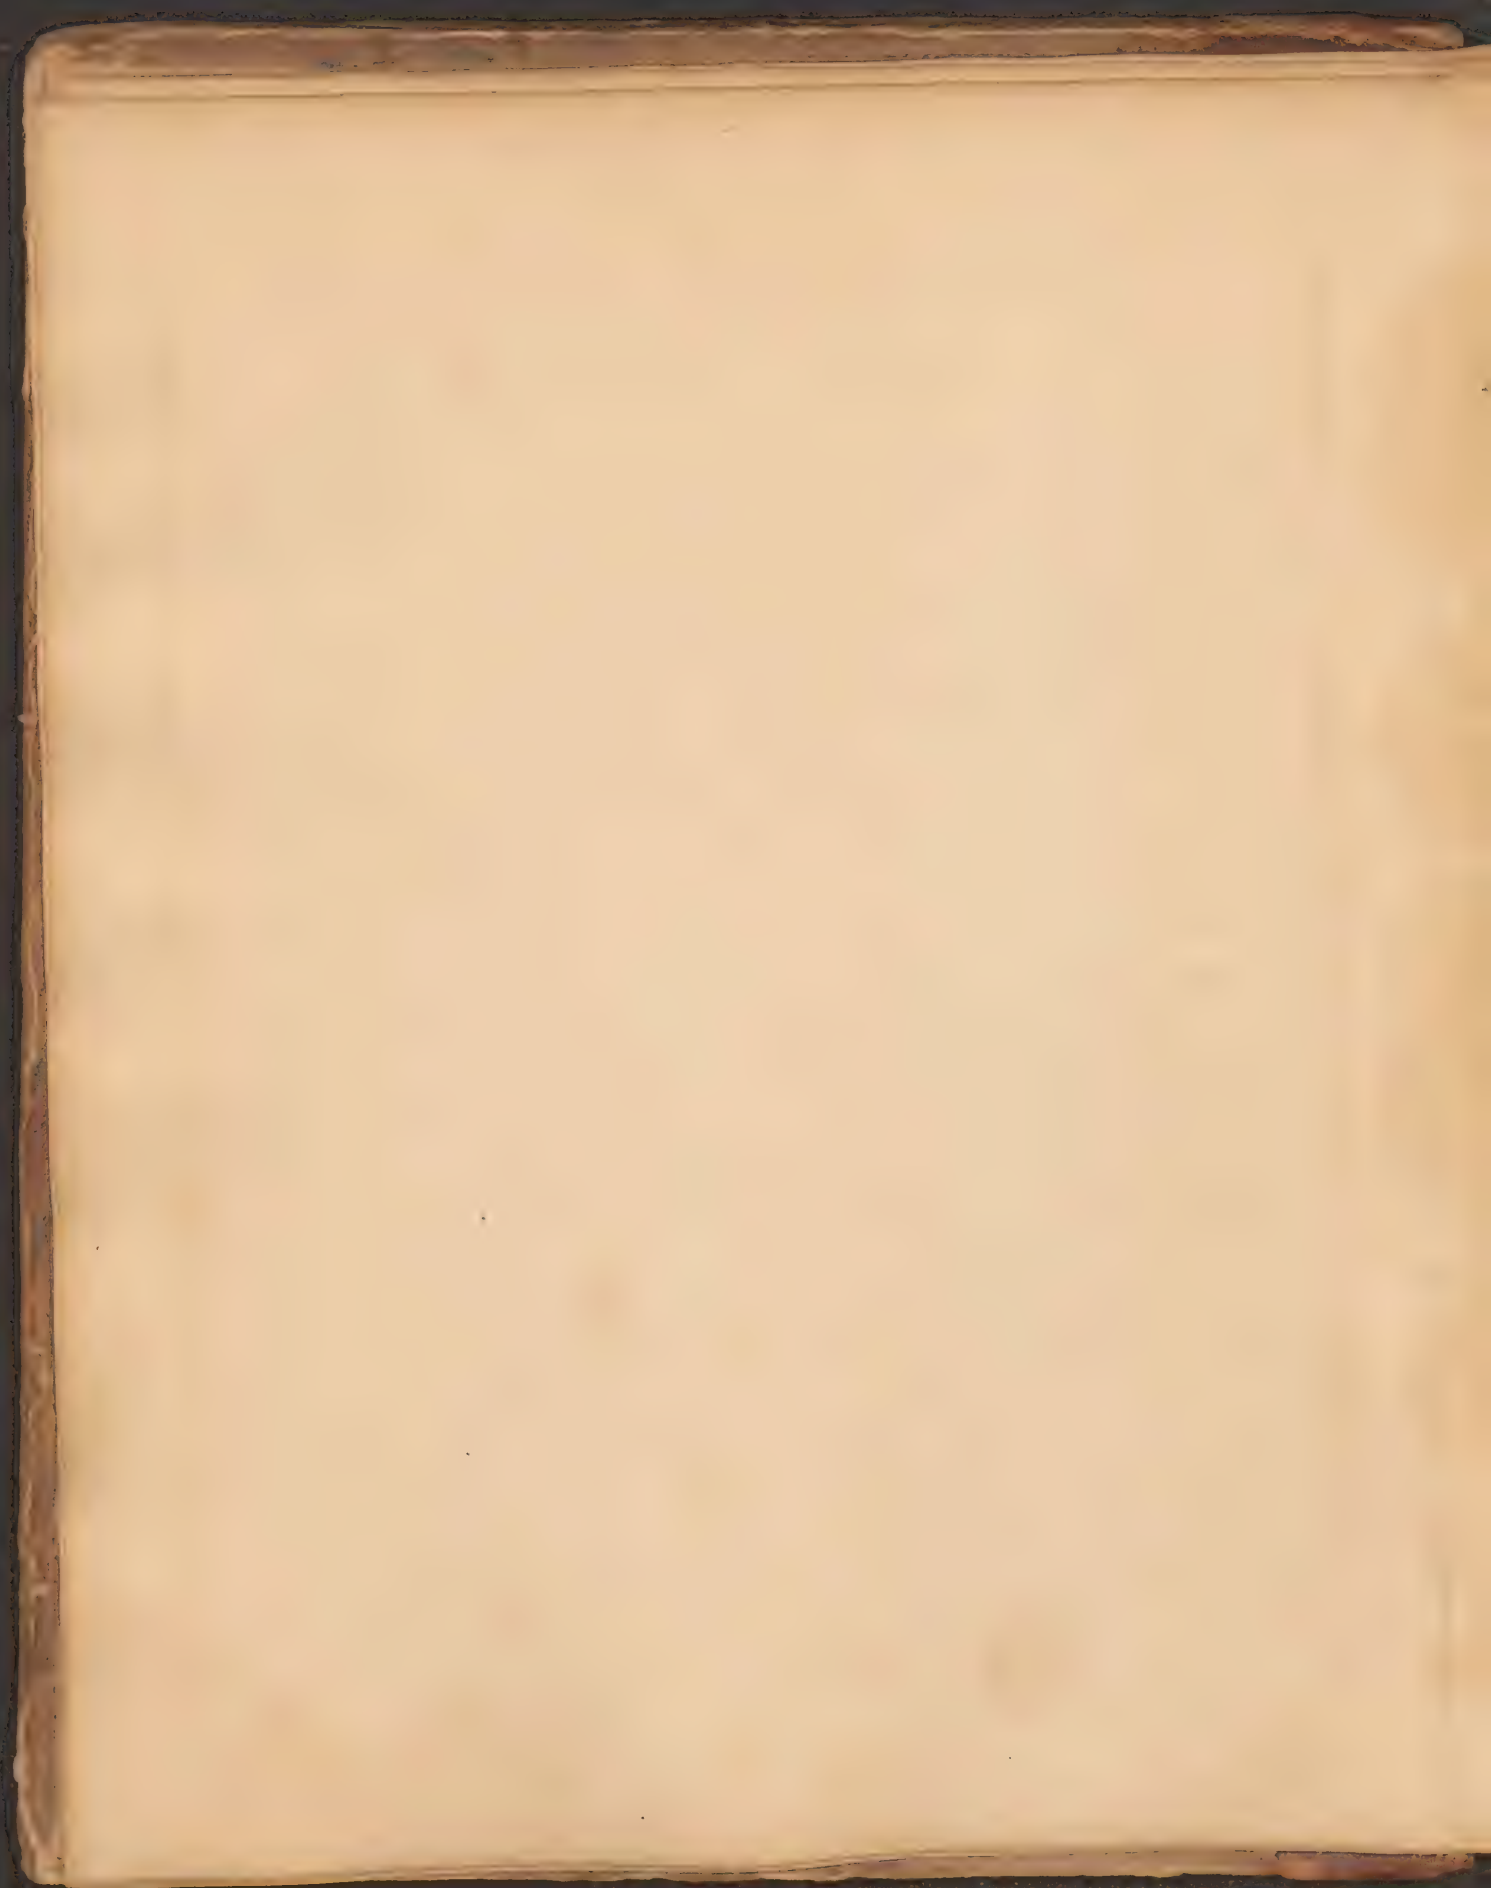

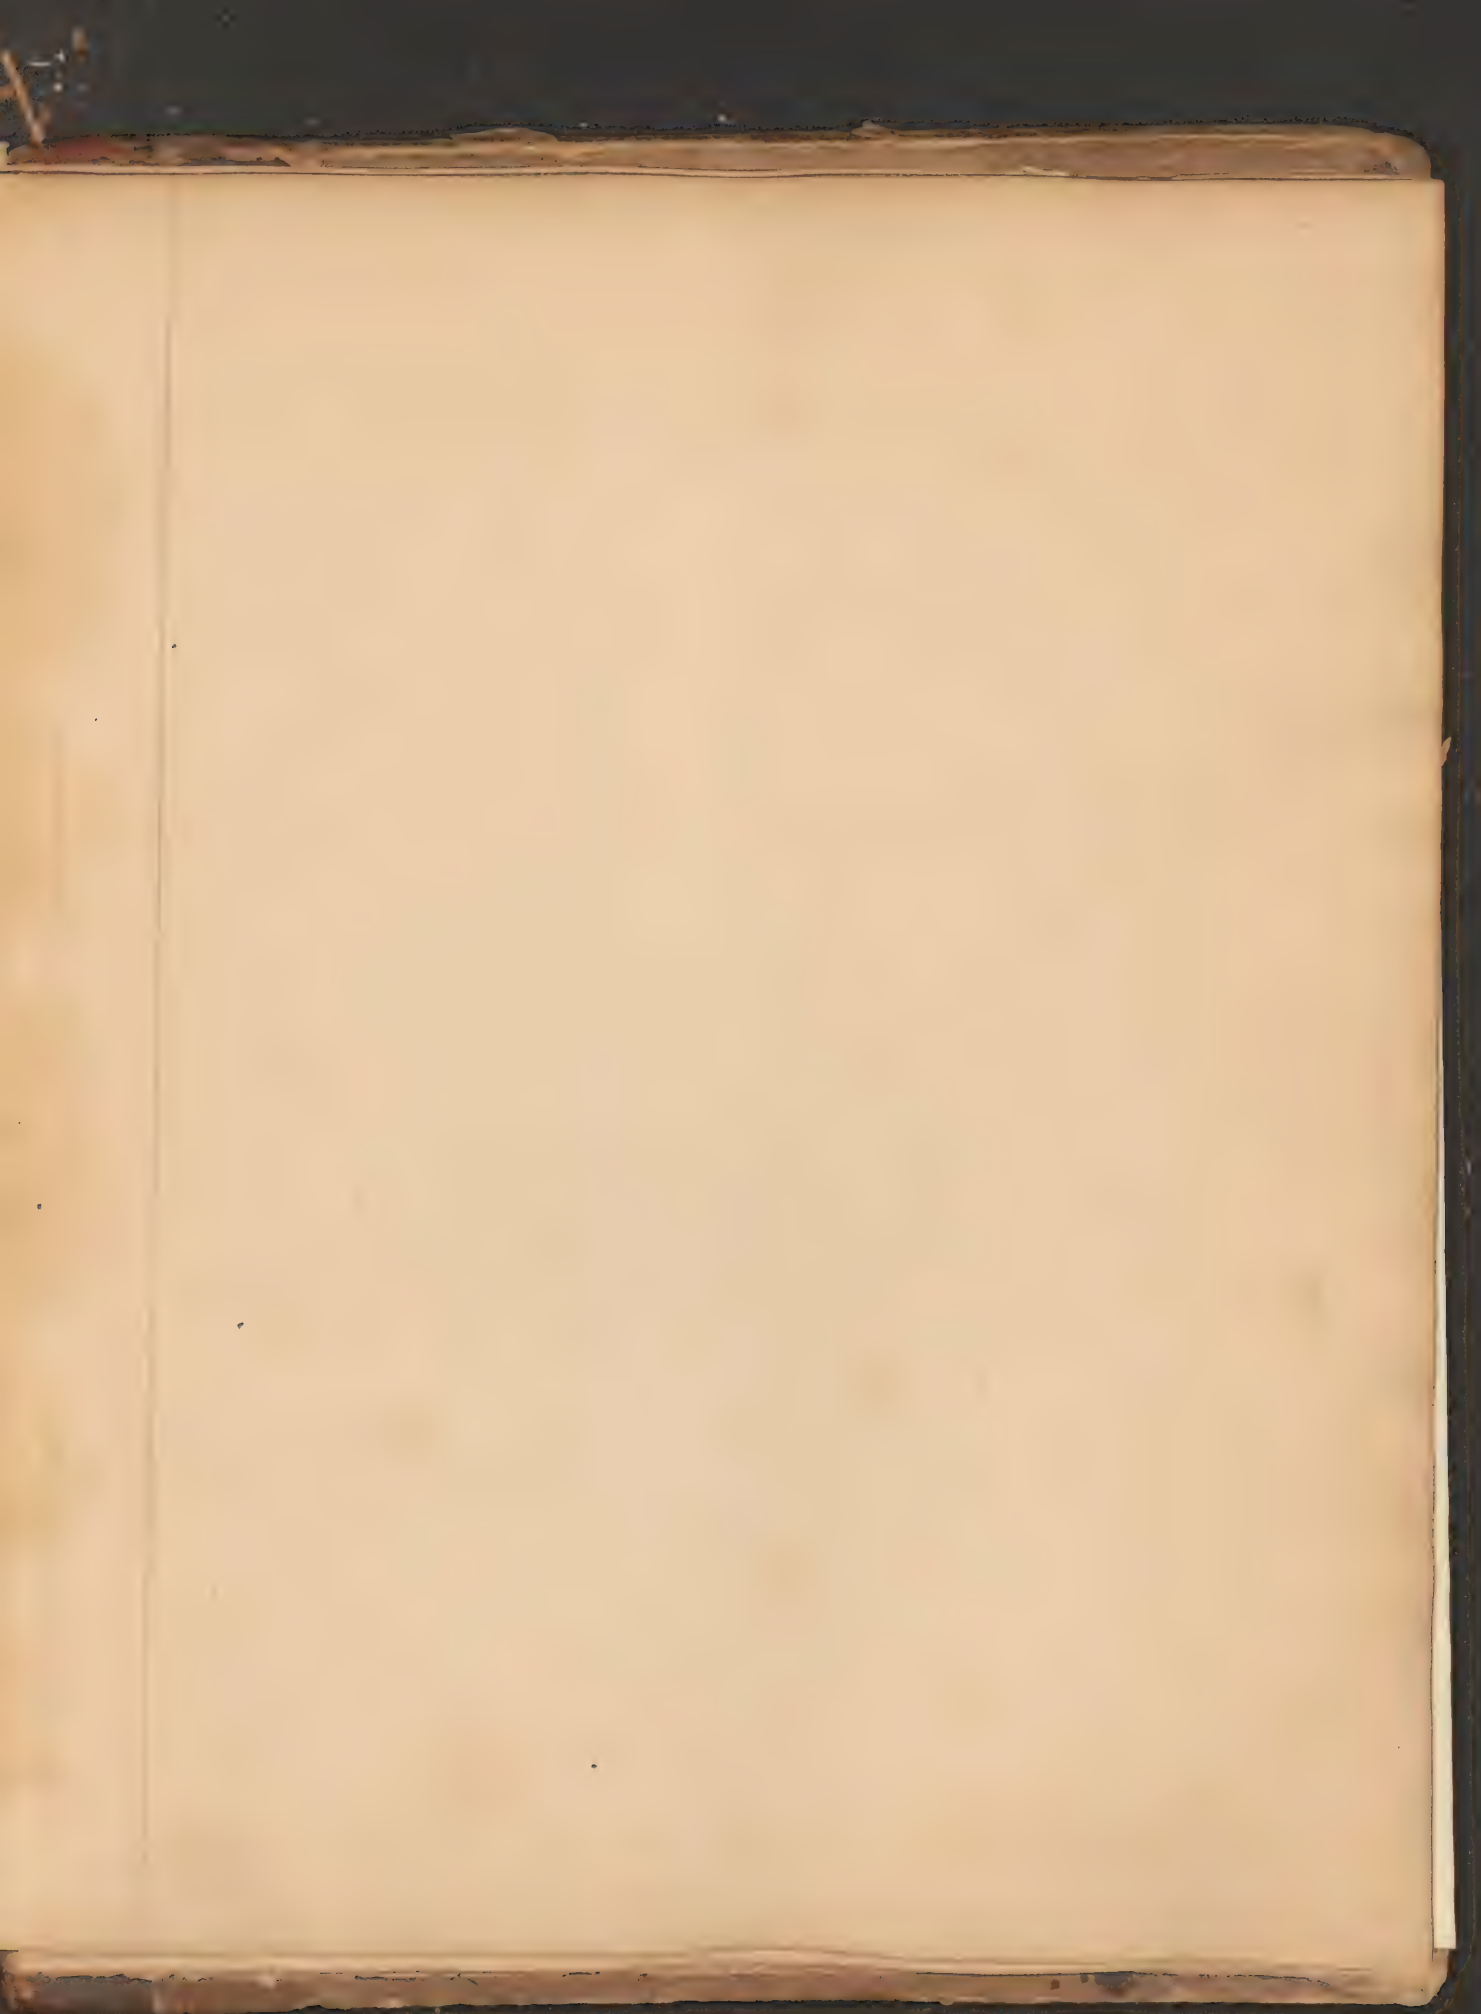

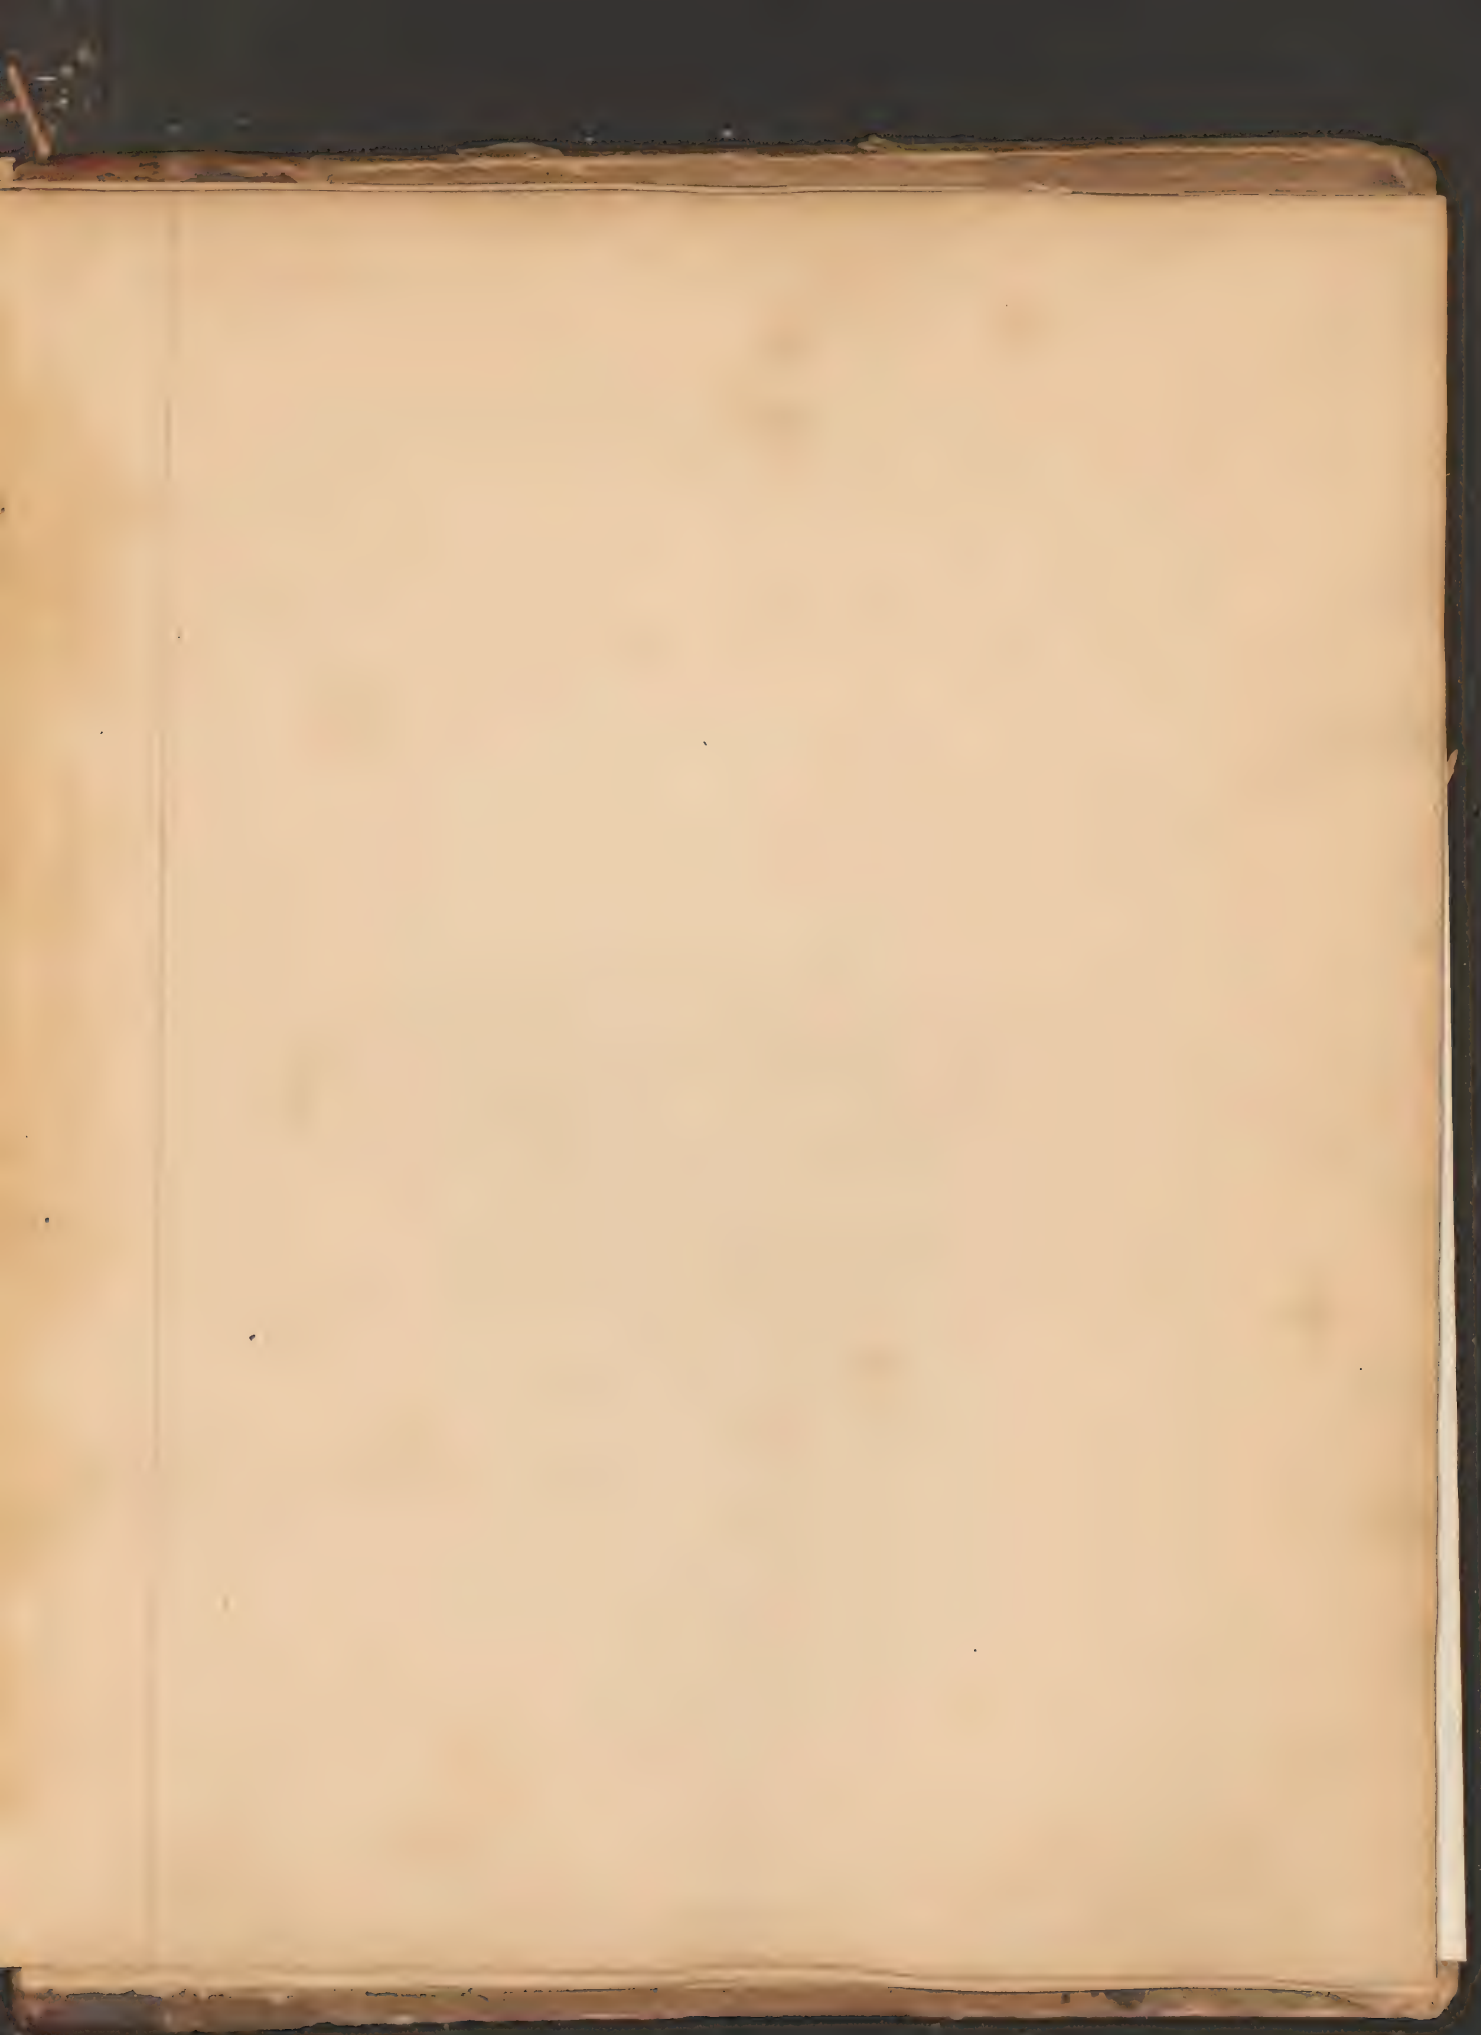

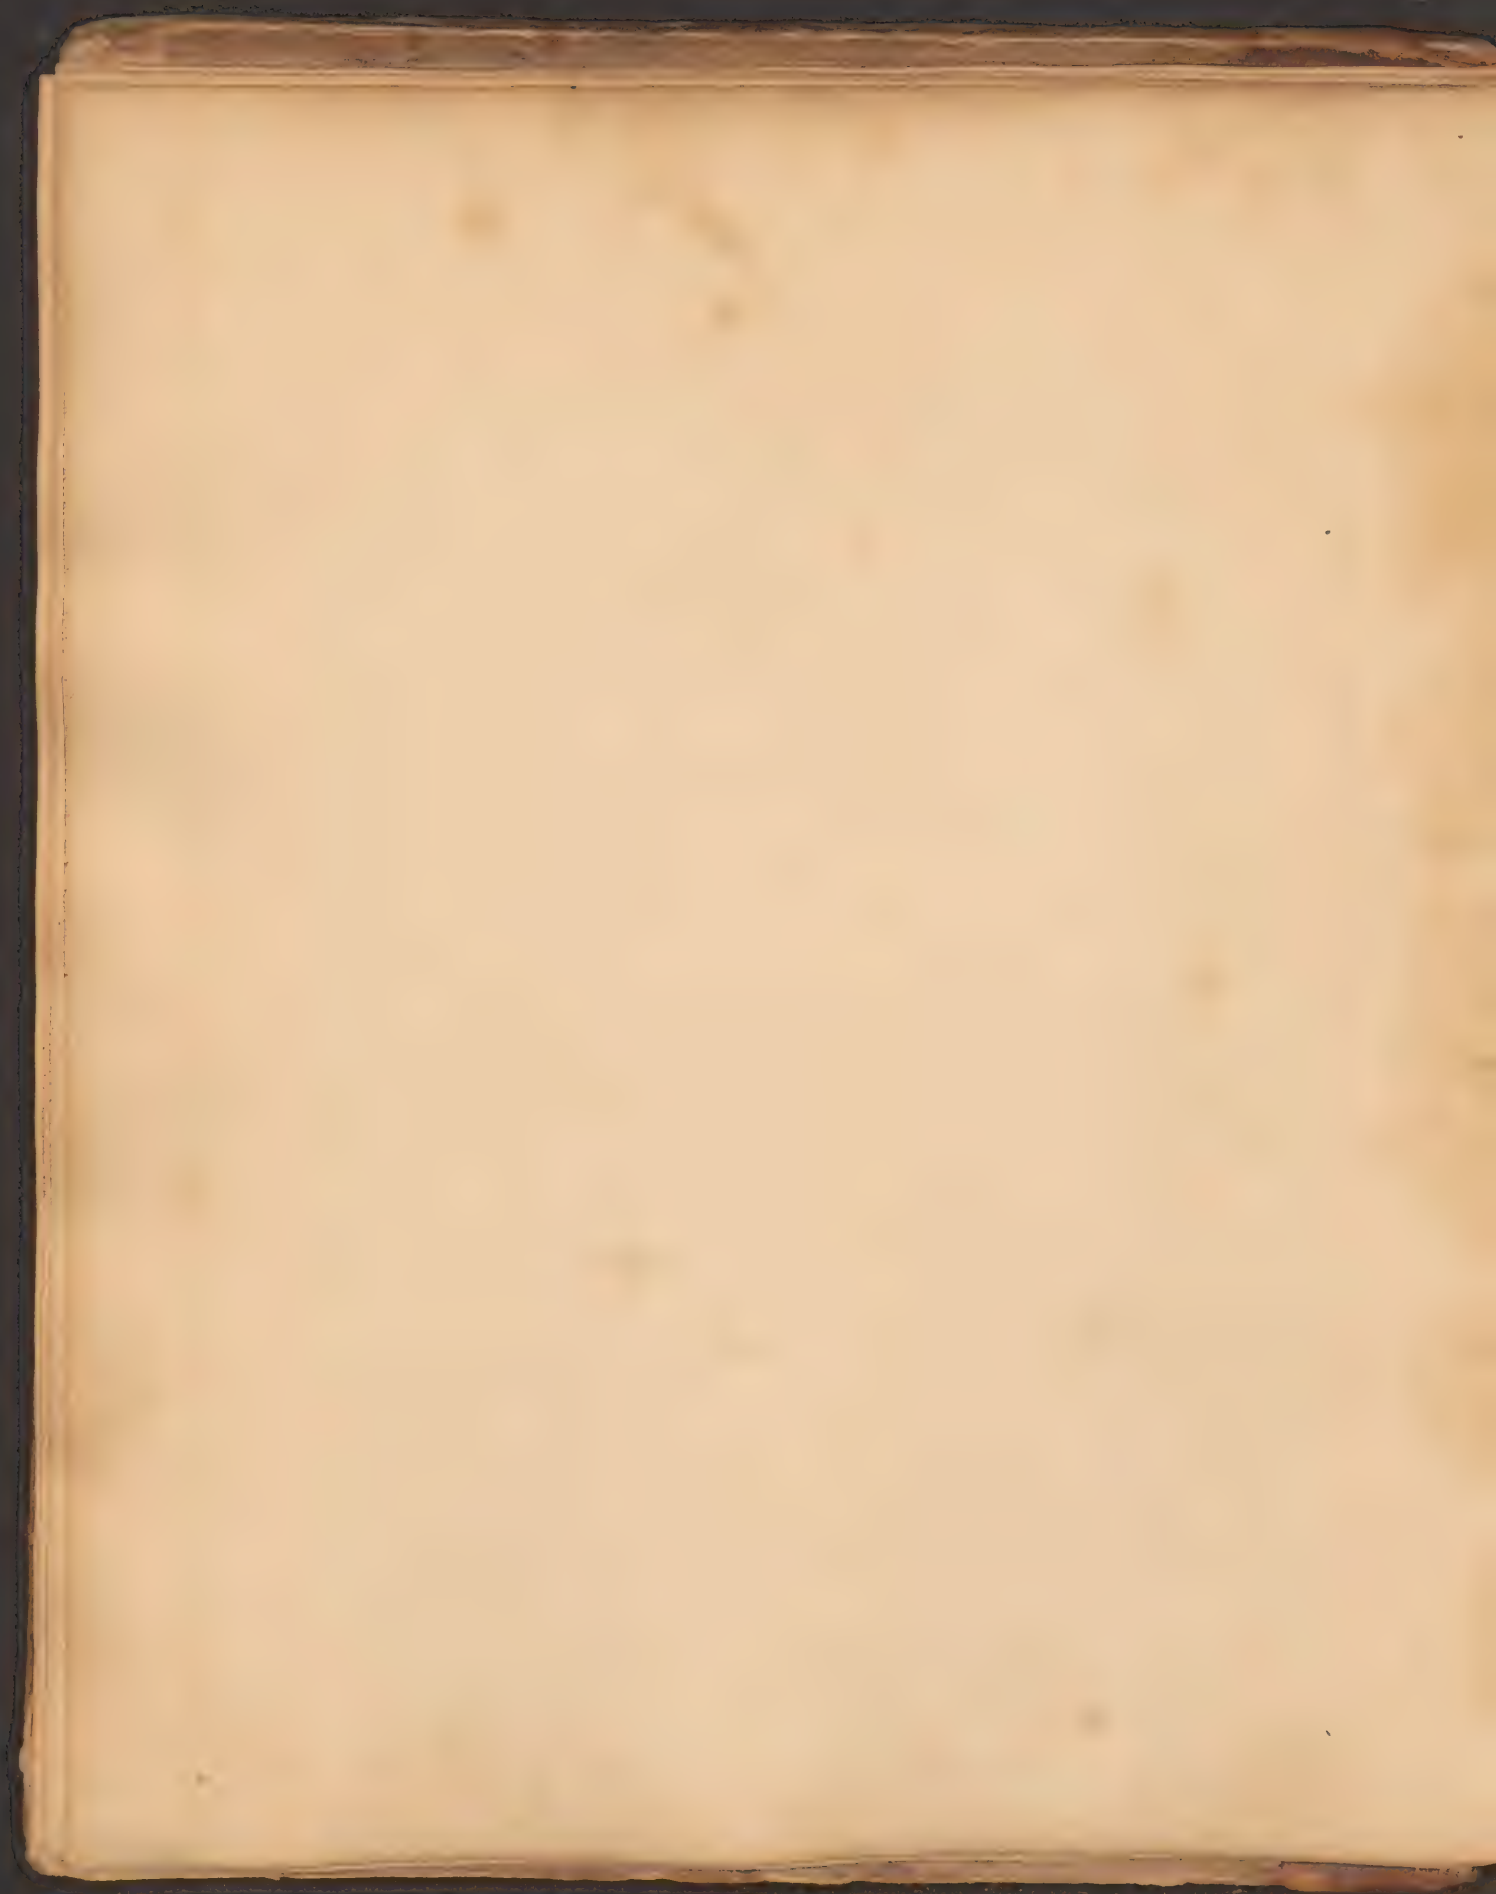

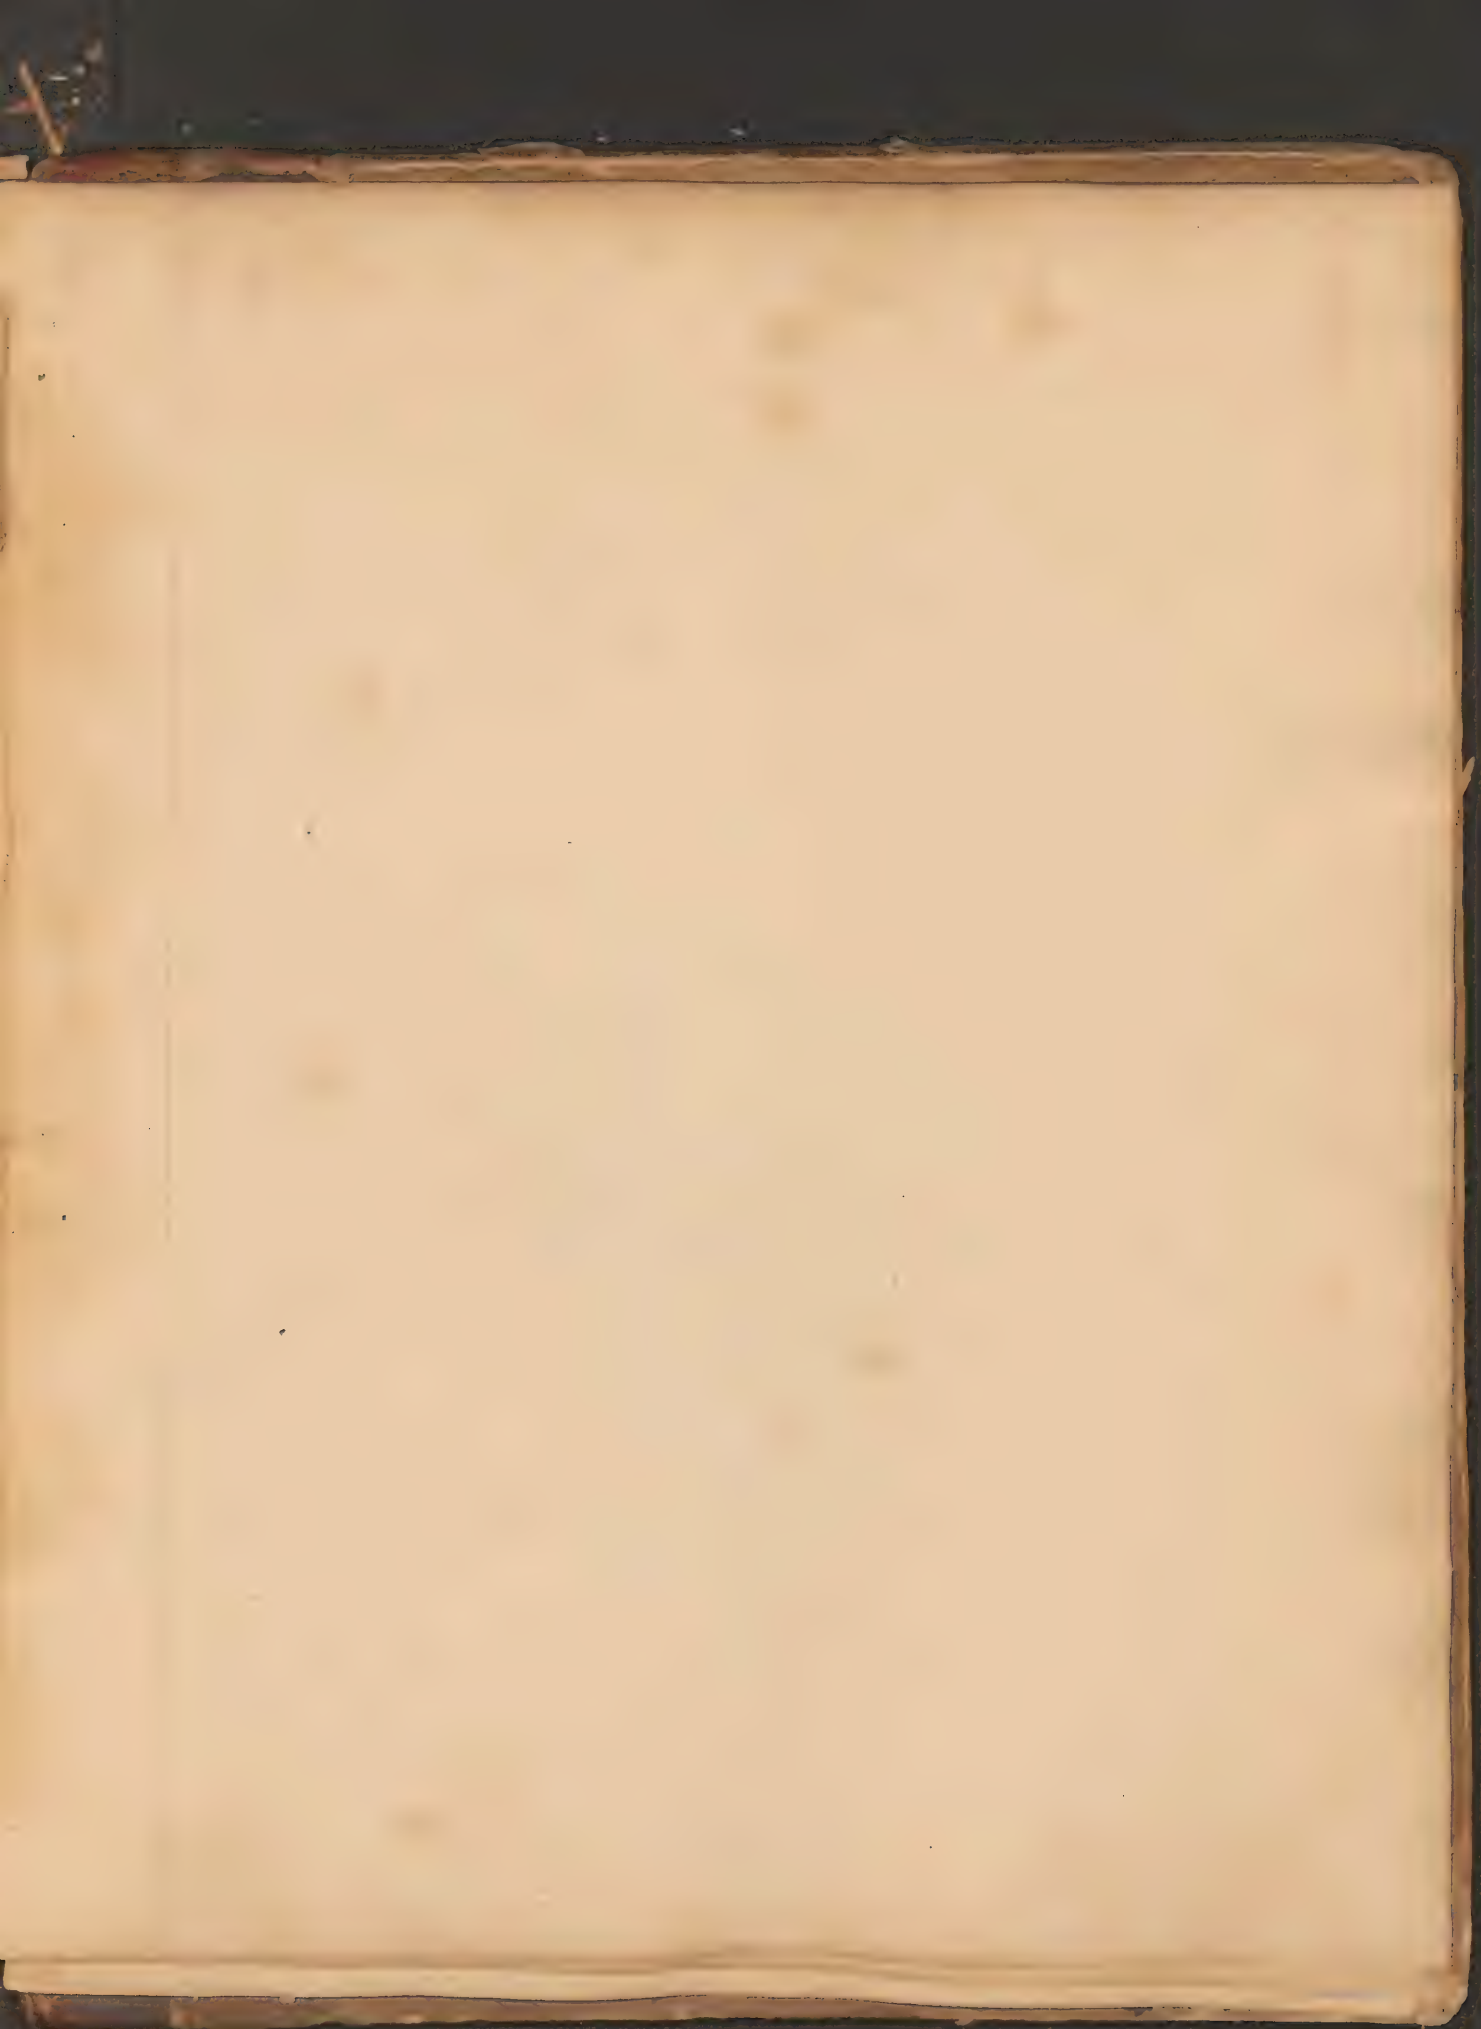

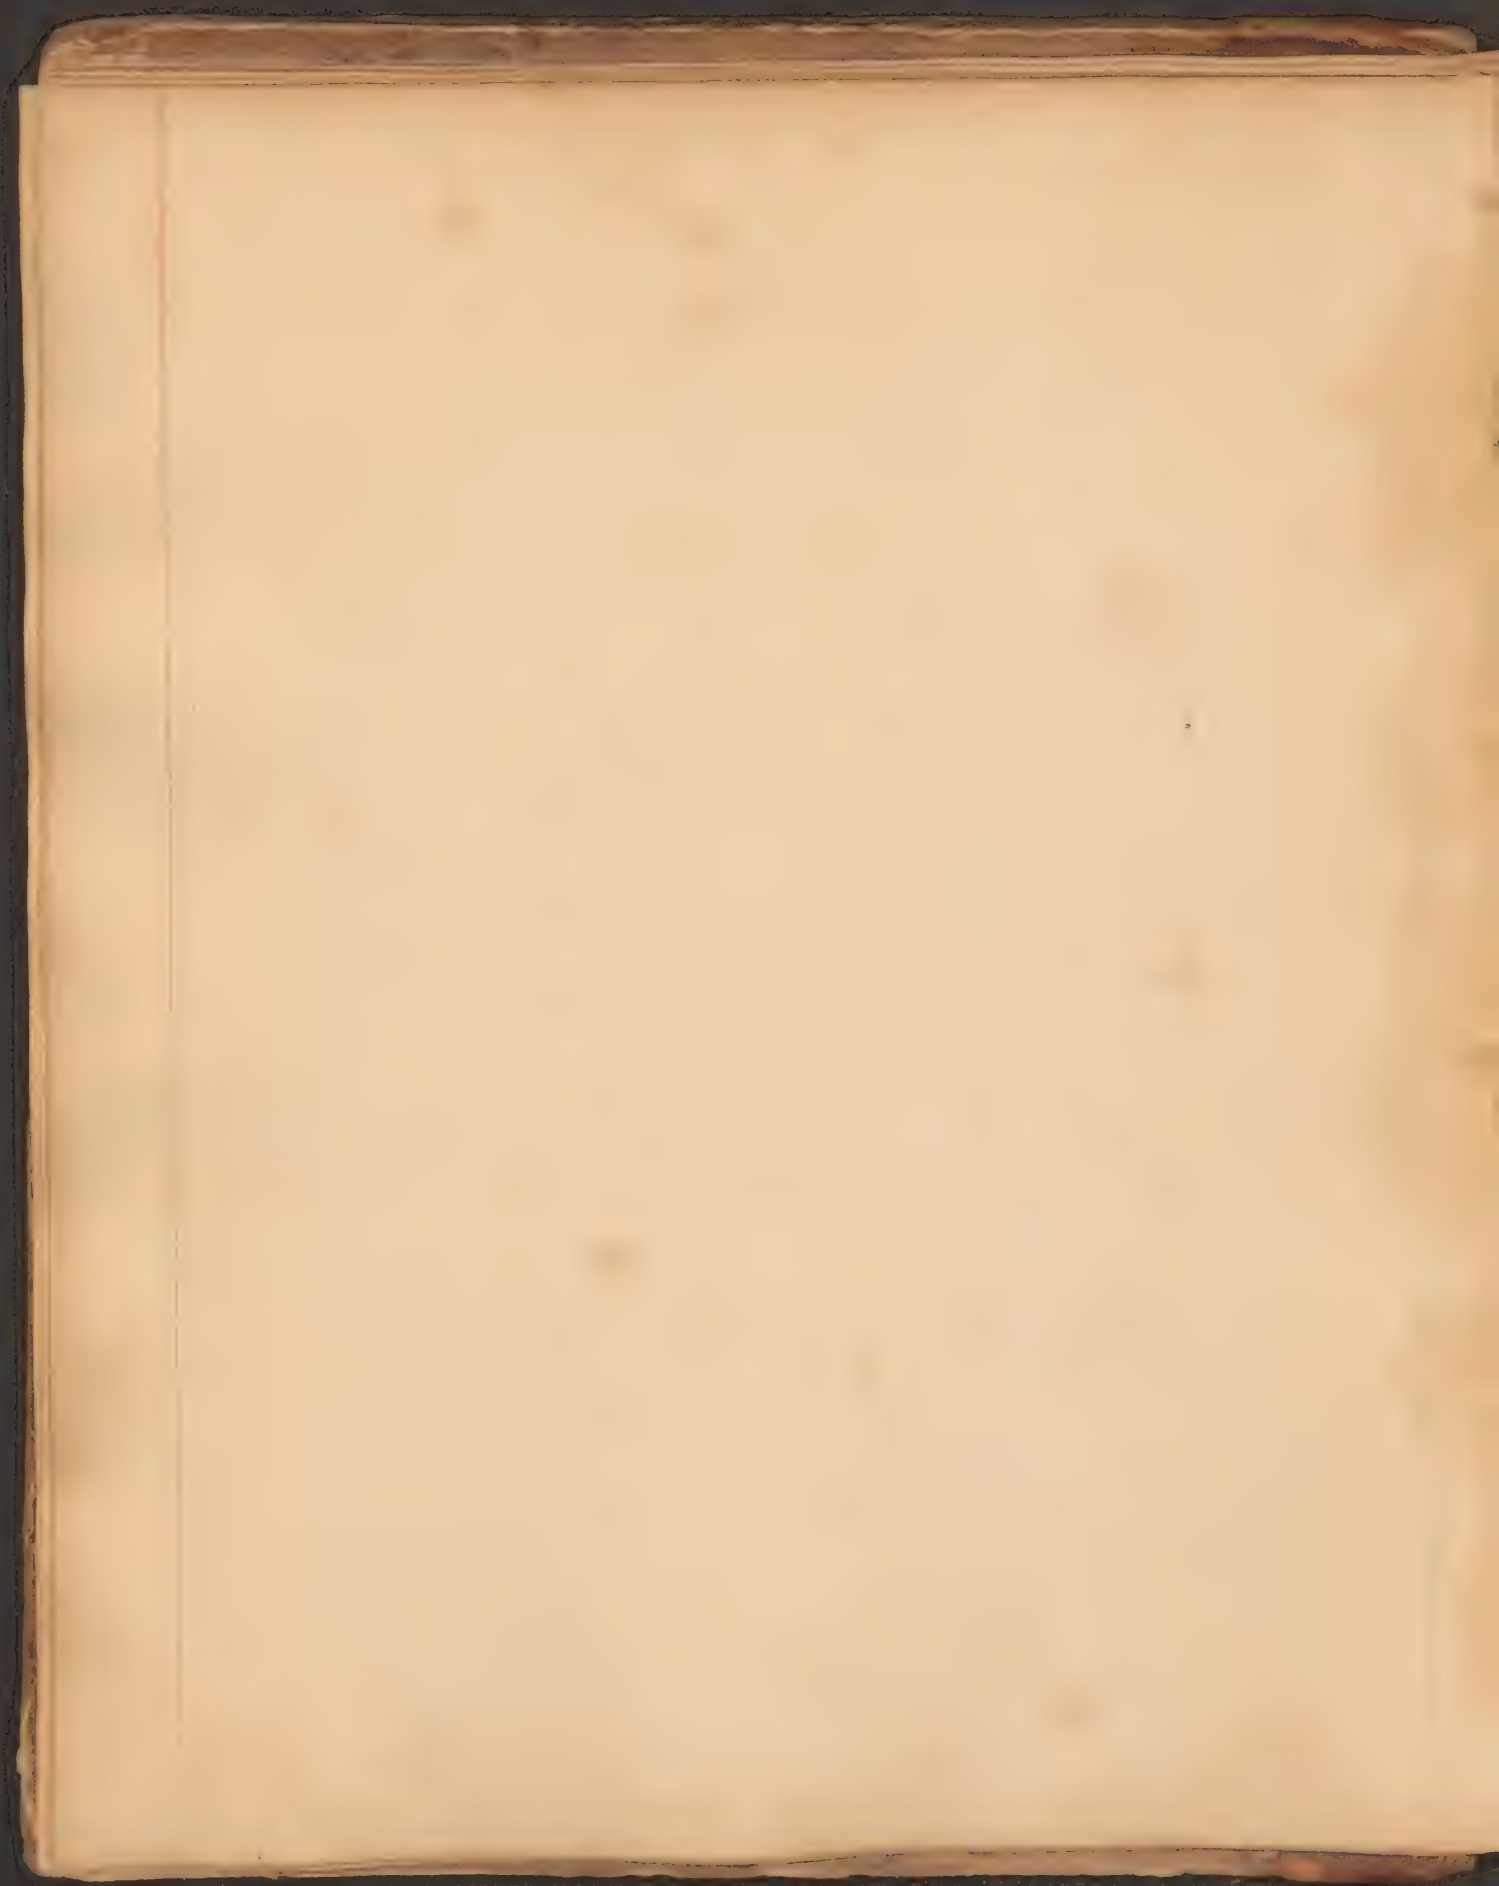

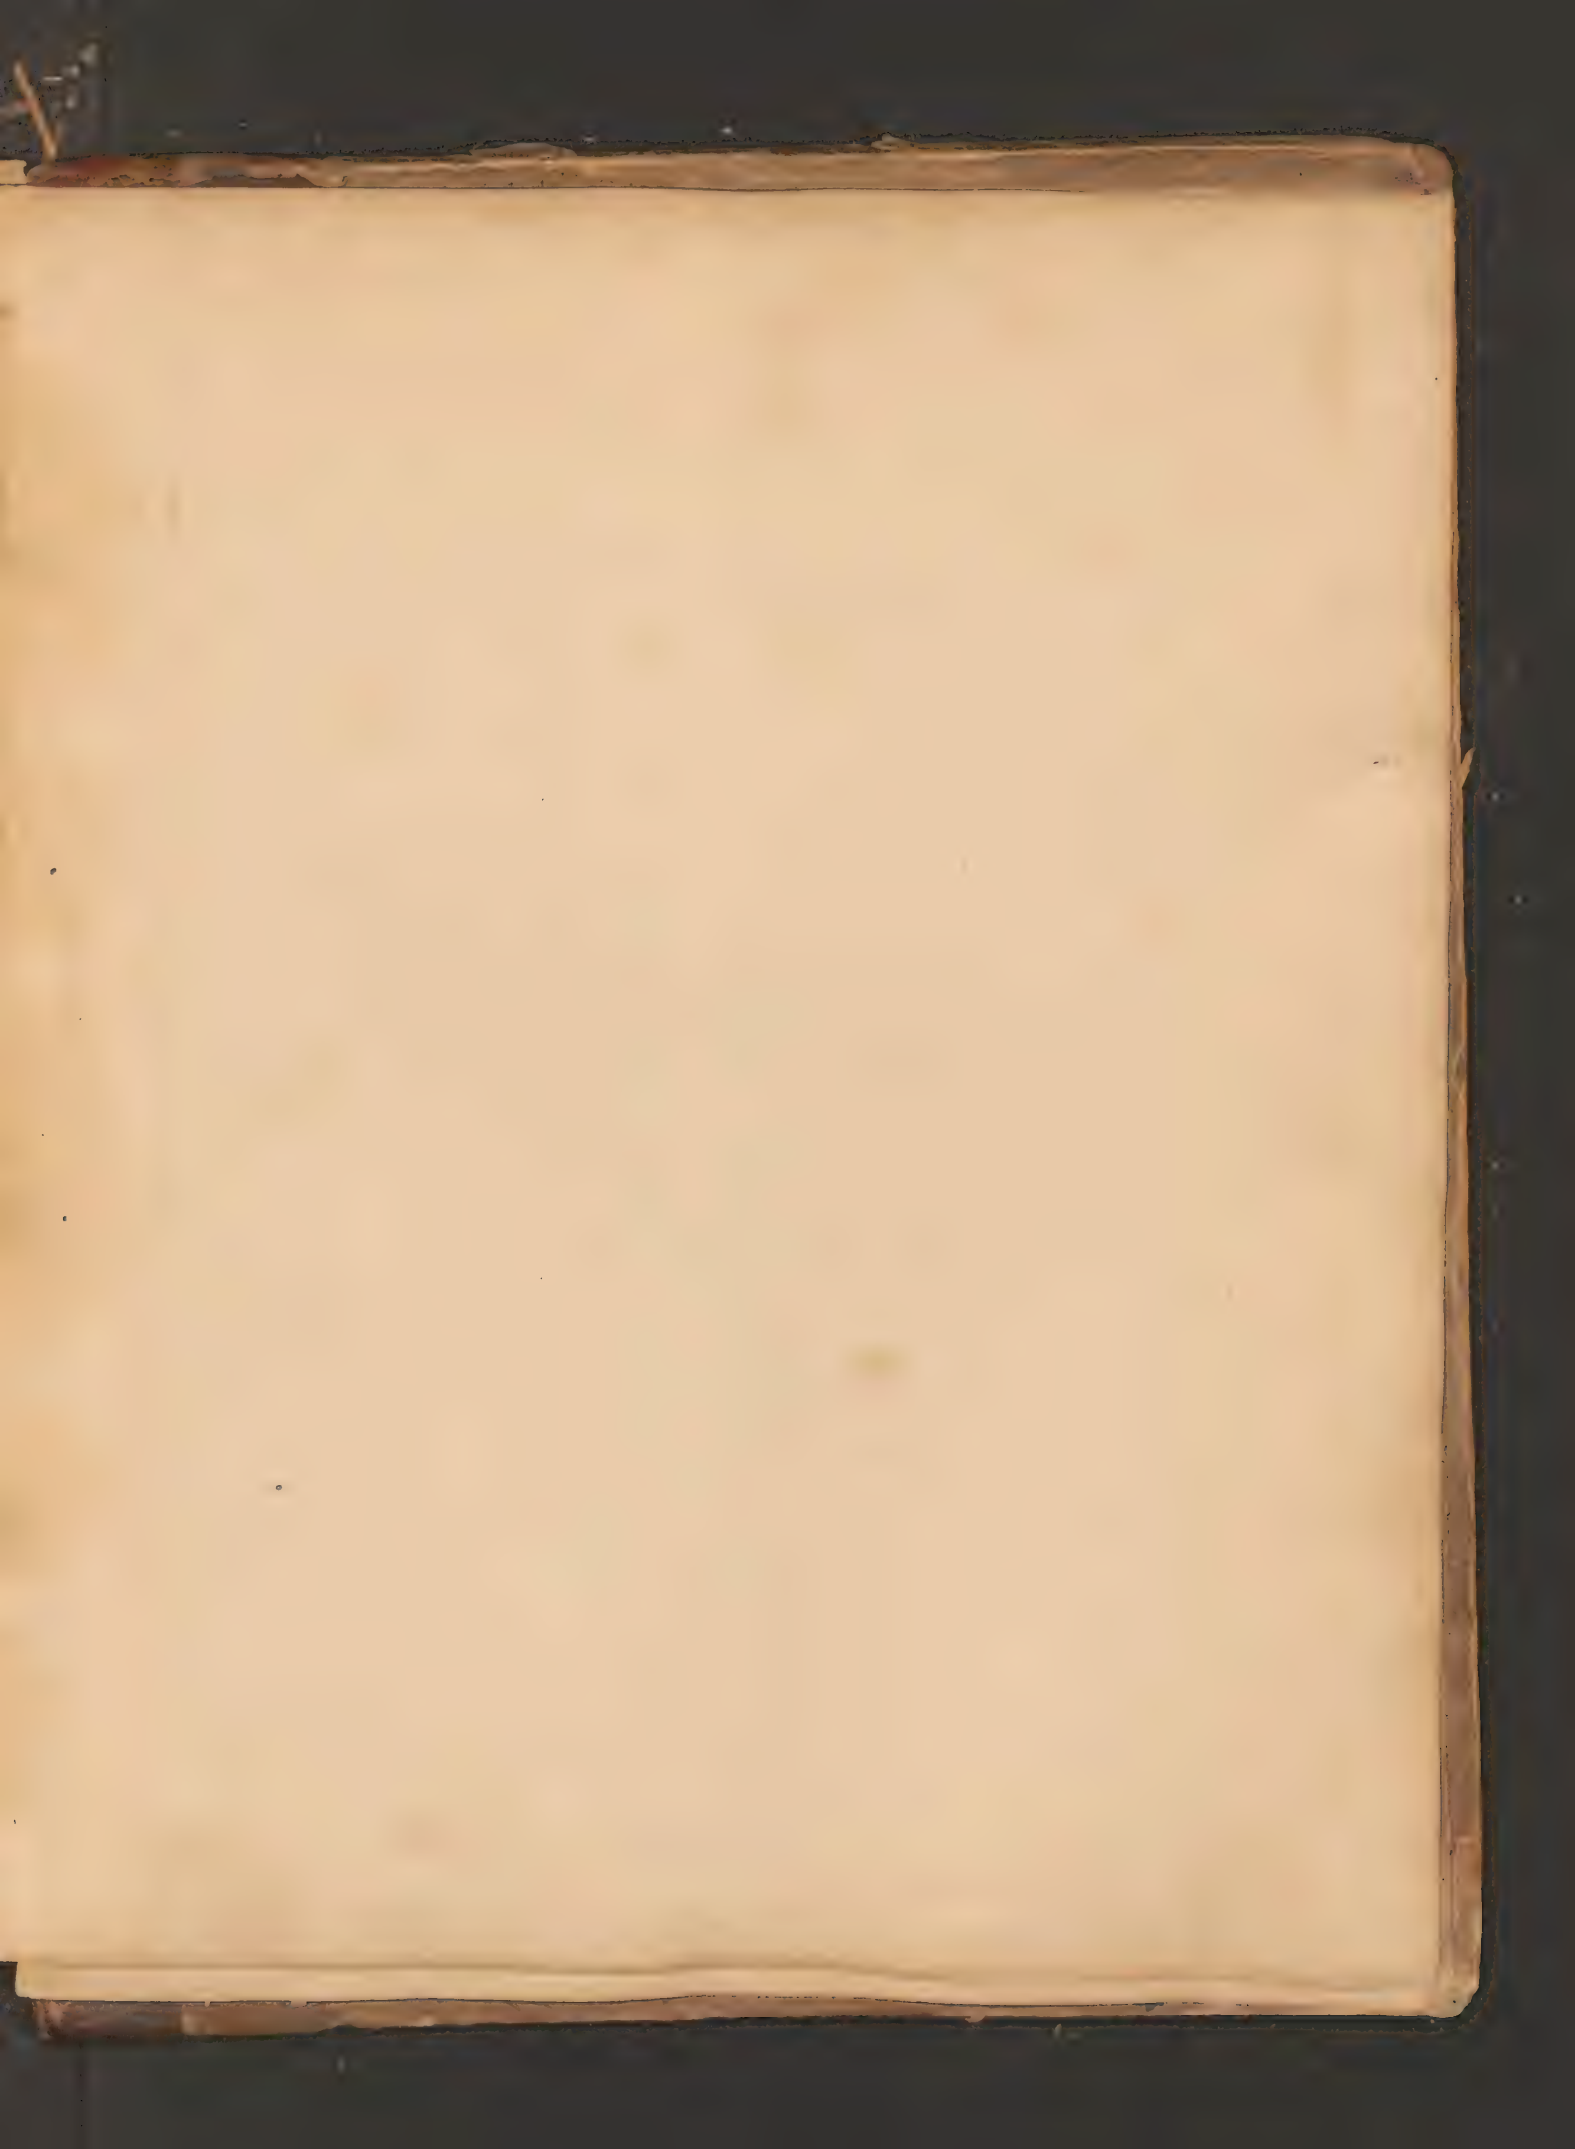

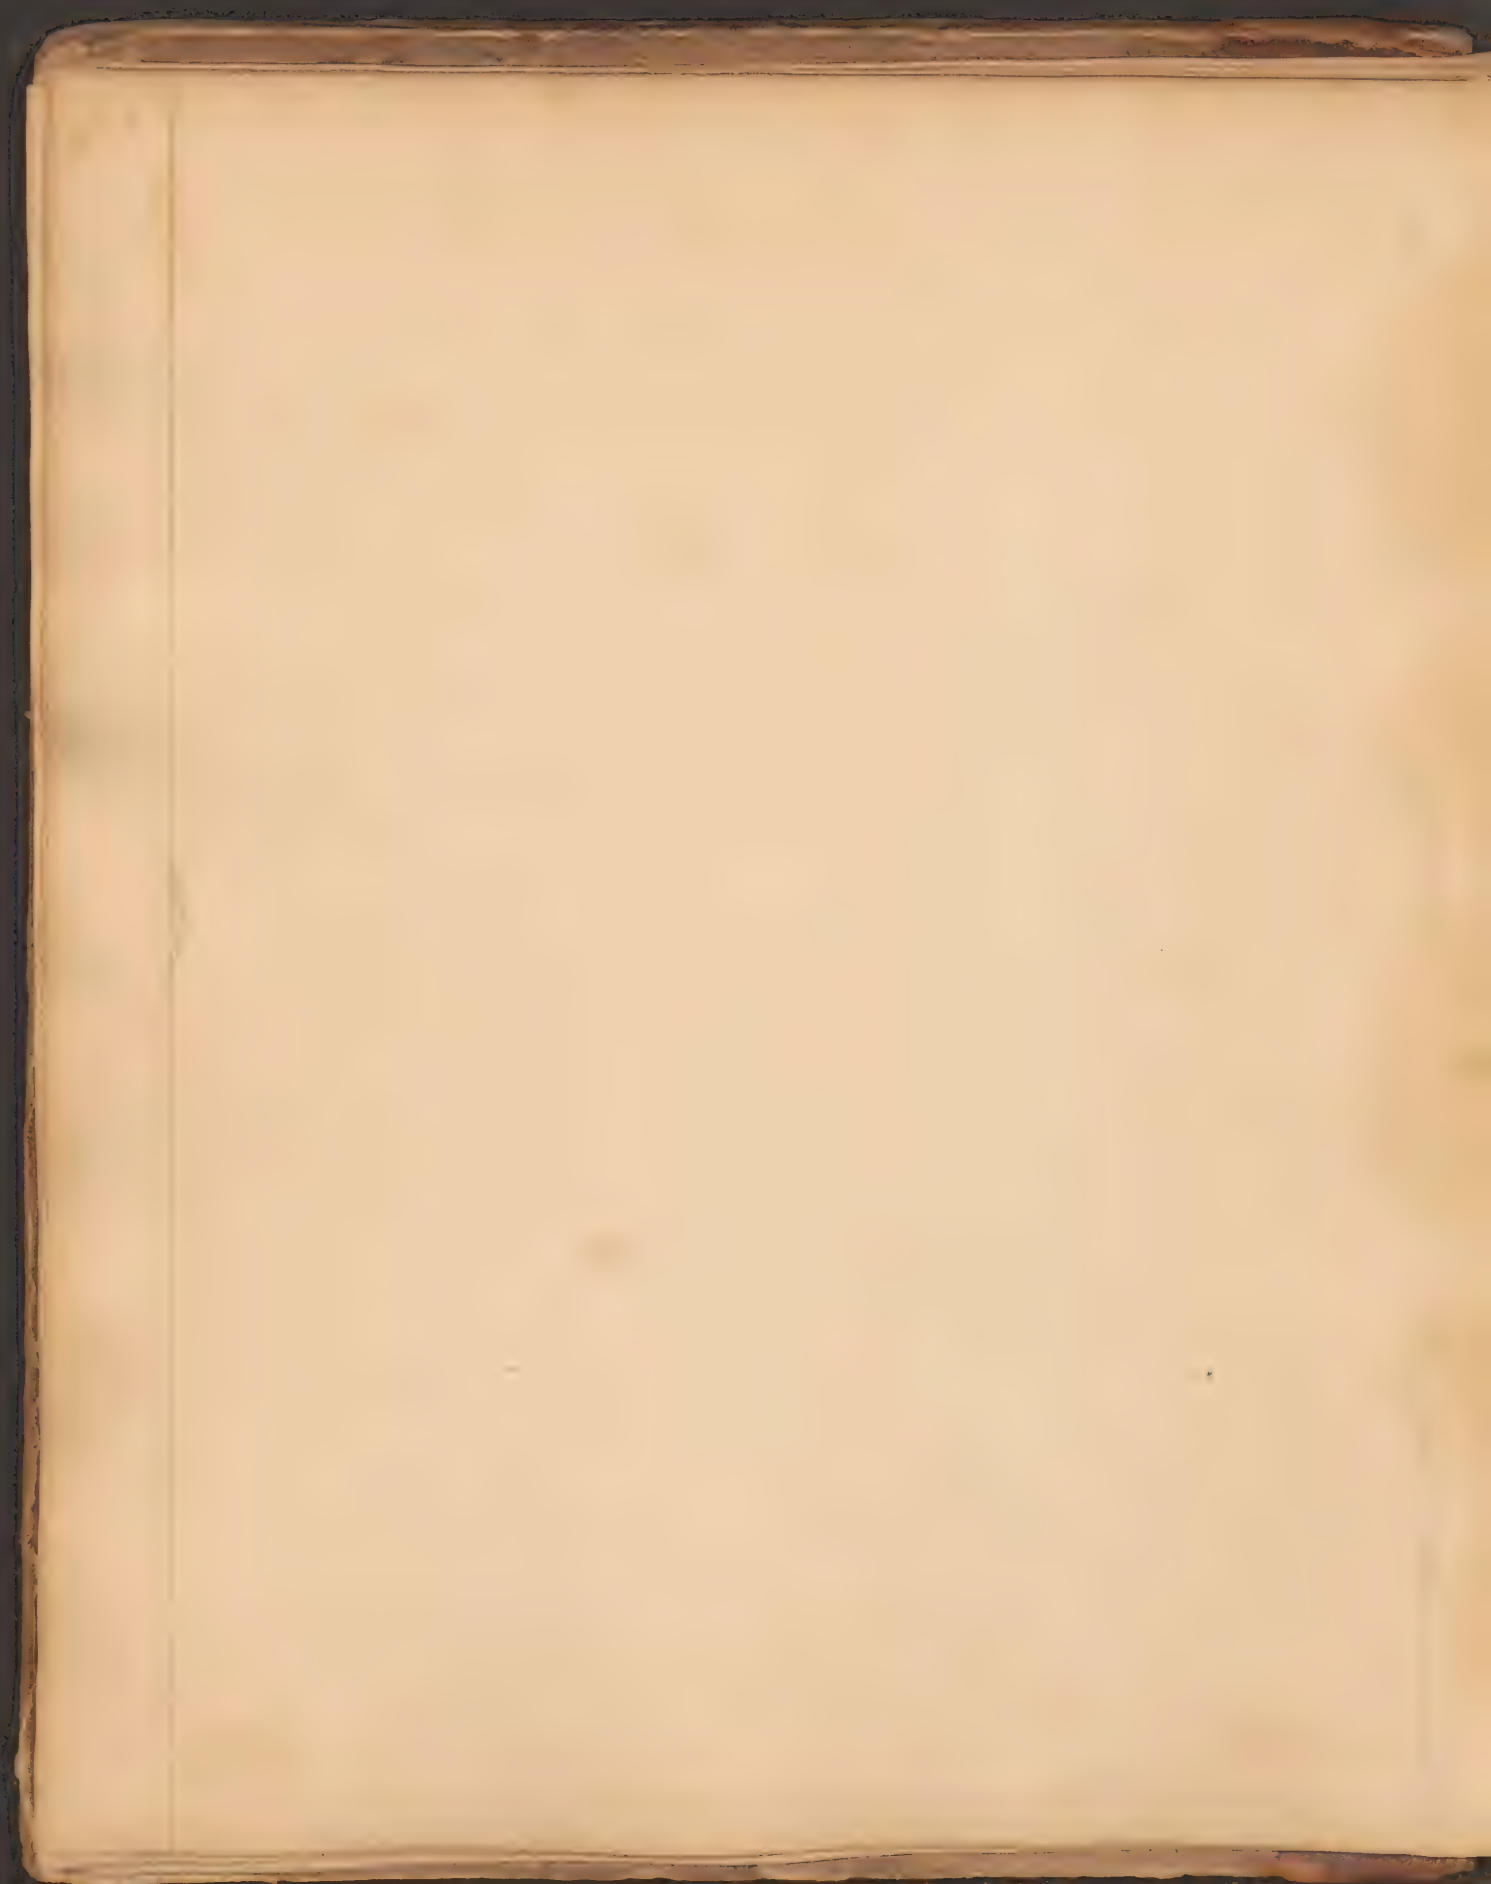

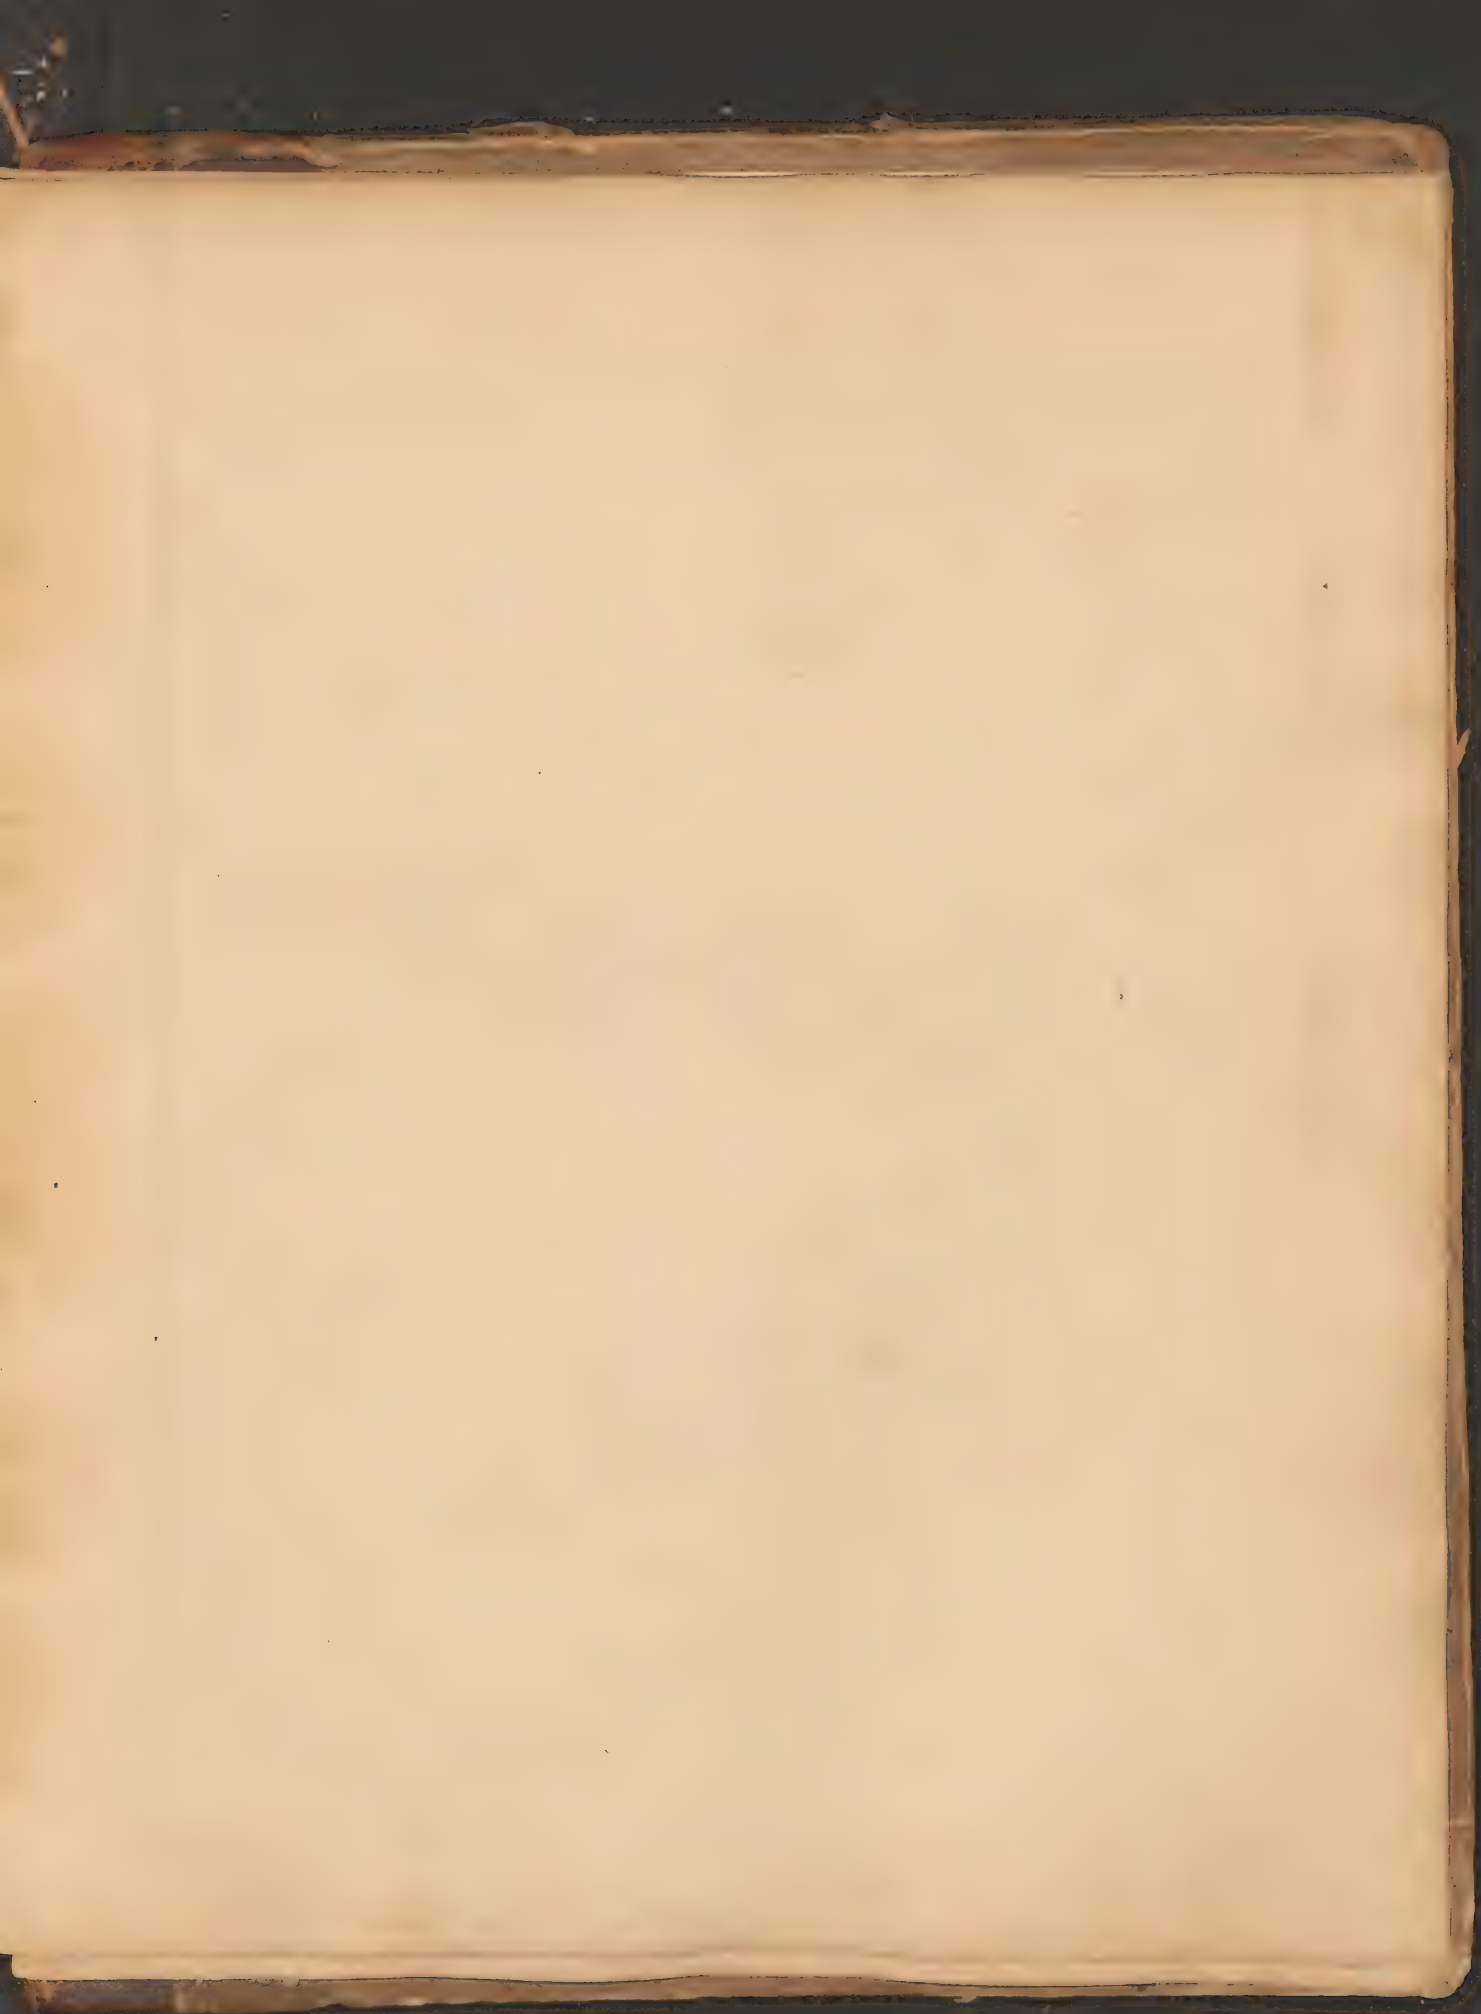

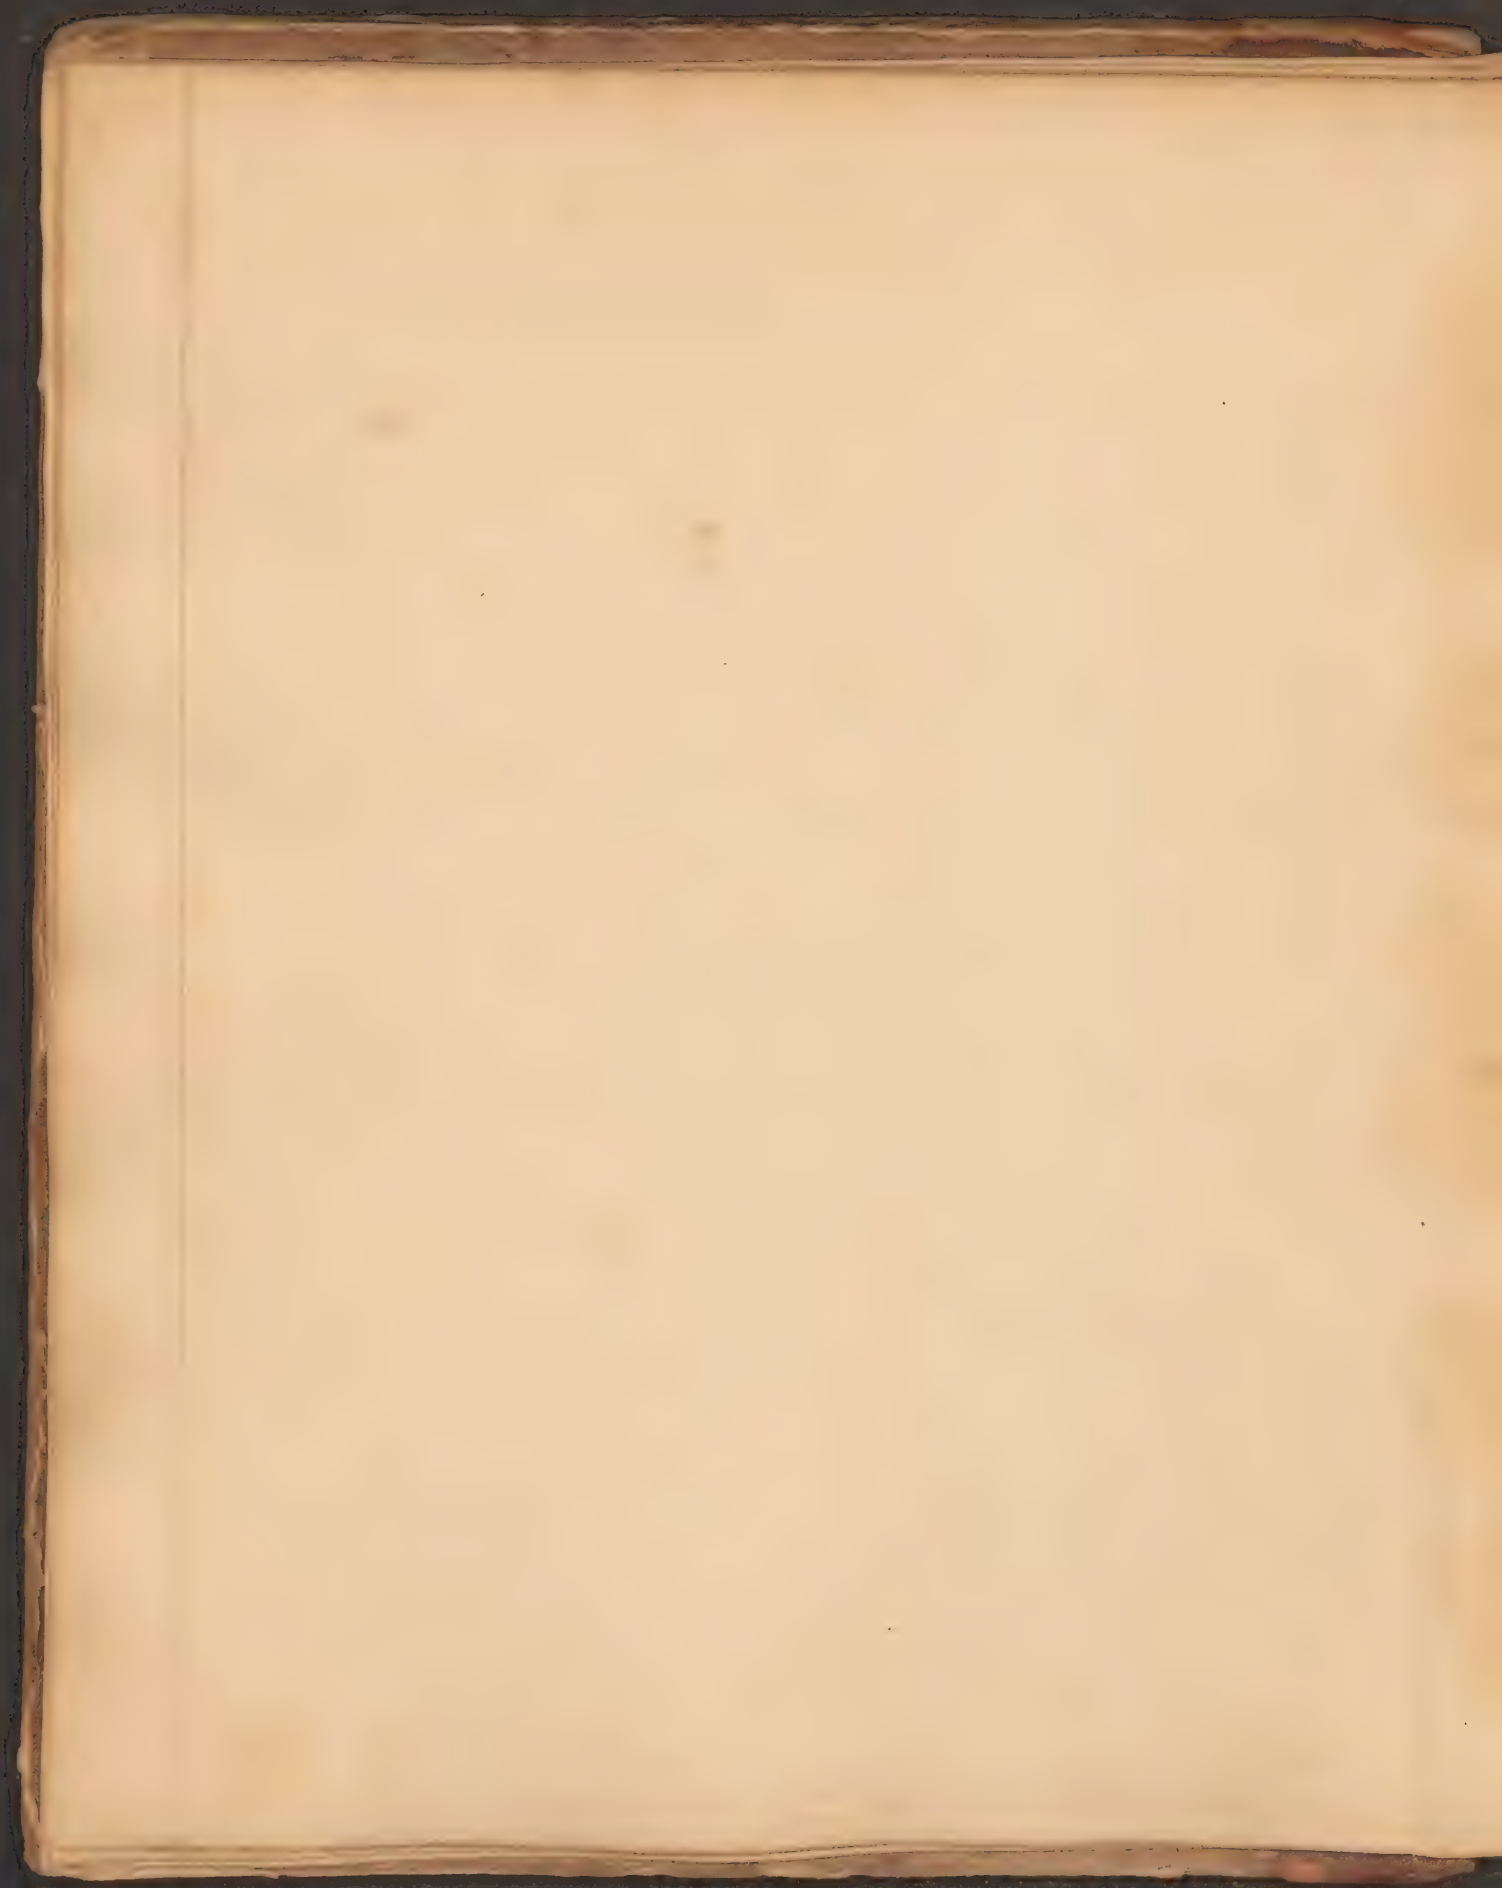

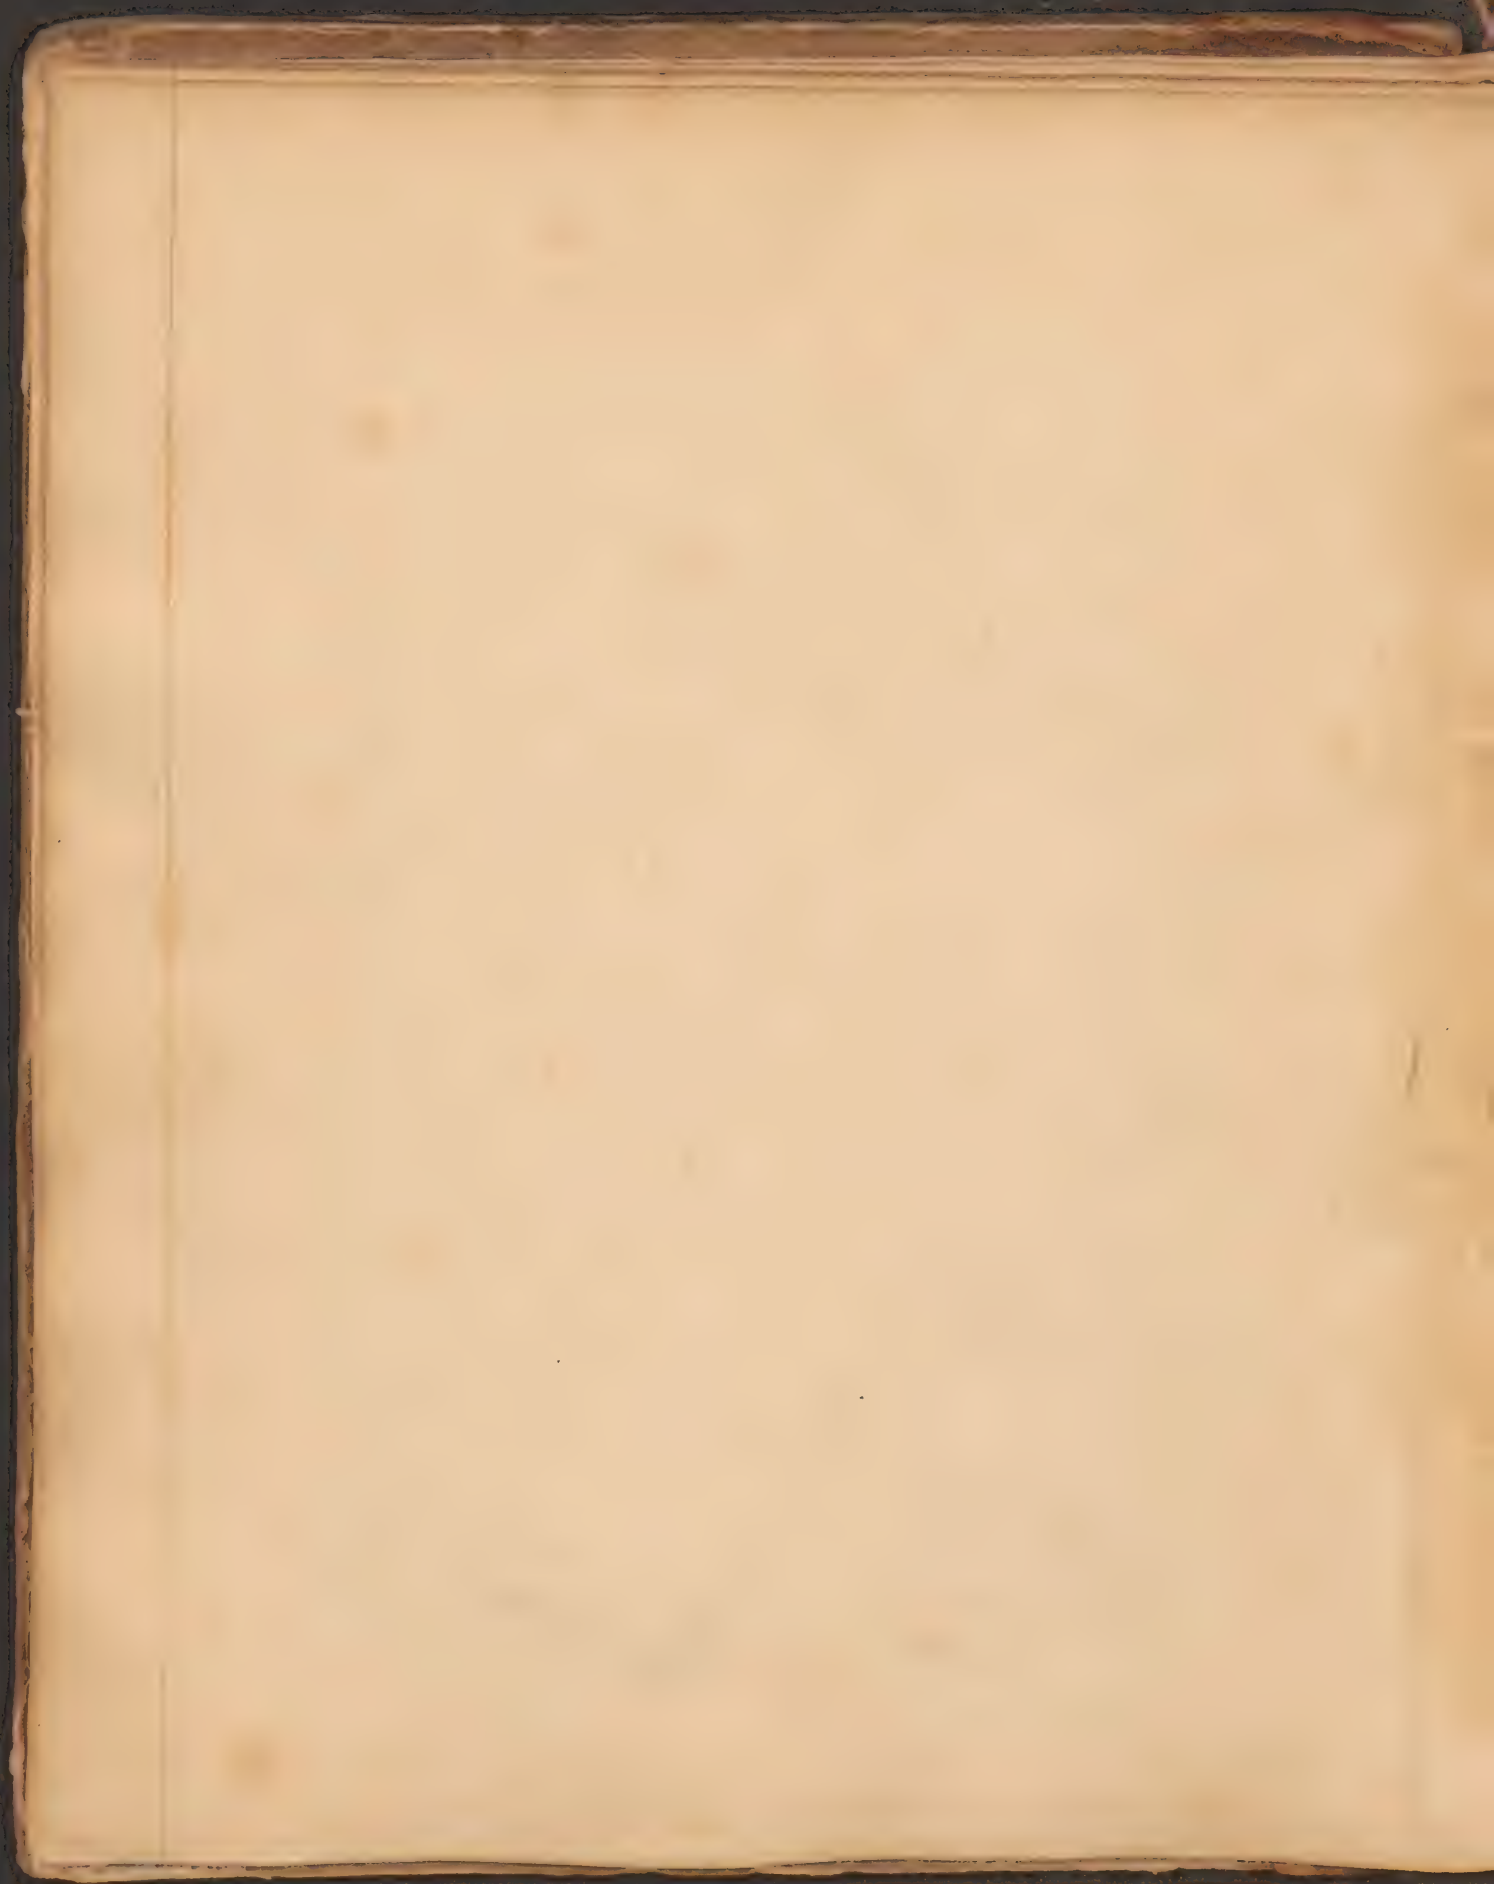

The Introduction

Gentlemen

My intention in the following course of Lectures is to treat of that useful and important Science Surgery. I shall endeavour myself with giving you minute & Anatomical Descriptions of Parts but much as much as will be just necessary for our purposes, this were to do would alter the plan of our Lectures. Therefore must refer you to your Anatomical Text-books. My intention is to give you nearly the Practical Part of Surgery. I shall endeavour to give you in the most clear, precise and expeditious manner. Some have disputed its being a Science, thus an Art, but it most certainly is a Science. It is useful to every one. Examinations upon it are made so clear and evident to all present. I have studied in the earliest time after I was free, to become the Surgeon. I was really the Surgeon of the Hospital of St. George. I have been very fortunate in my Dissections in the Close and were not only in Conversation, but in the practical part were pretty different and frequently at a loss. On the other hand I have studied by the use of Reasoning in Books laboured under an equal Disadvantage, in being able to perform an Operation bravely perhaps without knowing why it should be done or when it was necessary. I must confess however that I have often thought myself better than the Father of the Family they have confided themselves in. I have noted of Operations not only at that time, but a clear account of the Diseases and the Operations. I have been in the Country for the last twenty years.

Principal Writers laboured under. It may perhaps be expected for as is usually
the case in this kind of writing that is of the kind of writing you are alluding to the History of
surgery, which though it has of late years or is doing so, would engross too much of
that time which I think can be better employed in facts more beneficial to the student
or should I do it it would be nothing but a series of Names and Dates
I cannot say as Curiosity in him to desire to know this, will find the
history fully mentioned mentioned in Gallie's History of Surgery, Clarke's Surgery
or by I think. The majority of Teachers have prefixed a numerous train of
Bandages and Instruments. The first is almost unnecessary and in general prejudi-
cious, and is a thing which has to be described in your course; The
second is a list of names and numbers, the third is a list of names and numbers
of the same kind without any explanation of the use of them; for the surgeon
must be obliged to find out the use of the same by the use of the
Instruments. On the contrary, I think they must be so simple and so plain, and
so plain to the student as to be able to use them. The first Bandages
and Instruments to which we must refer are the first. I shall in proper
time explain the use of them. The second has consisted of a list of names and numbers
which I think fully described by the use of the same. The third is a list of
names and numbers. This will instruct you in the choice of Instruments
and the use of them, and you will also see their uses. The use of Bandages of
surgery has followed for a long time is this, that there has been a list of
the following parts Into the Scientific under which are ranged all
wounds, Ulcers, Burns and Scalds; The Diseases, as the Operation of the
Surgery.

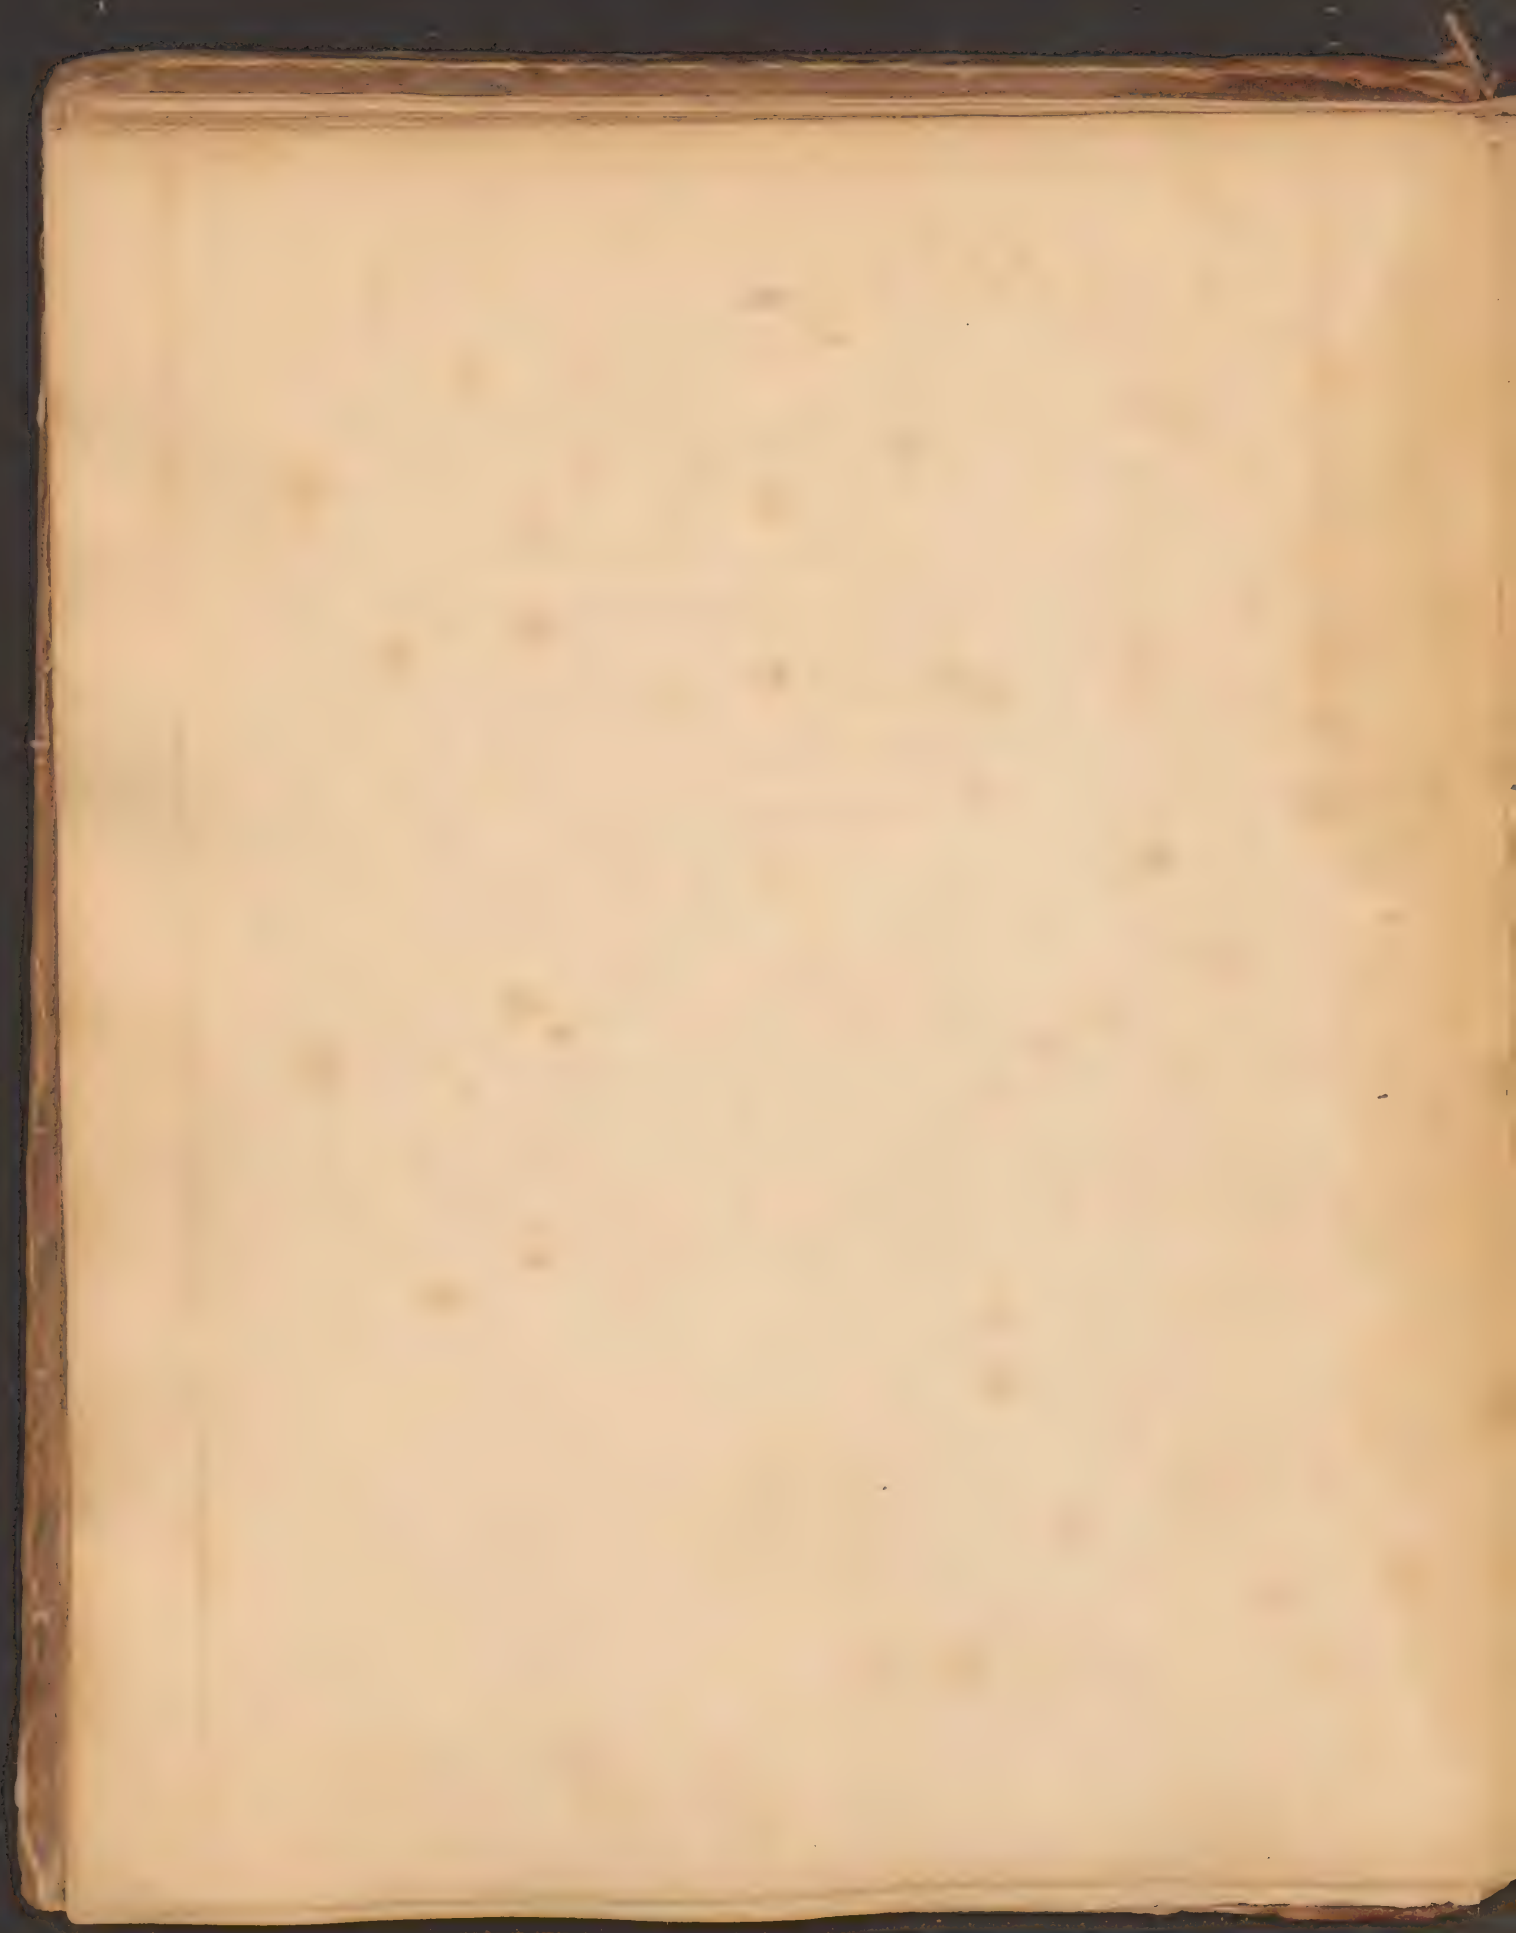

[illegible]

History of Surgery, the former must be from the top of the head. ... Surgeon
the former is a necessary part of the latter, the latter is the former's strength
and health. Much more might be said to illustrate its Importance and
great Utility, but these few Instances clearly prove it, and but of such as to
be proved. Many People (I am sorry to say) consider Surgery under different
lights: It is practiced only for the sake of obtaining a livelihood, many little Art and
Tricks are required, but considered as equal and useful, indeed, it requires
steady Application, Ability and Integrity, and as you get the requisite Requisition
you will Despise and Abominate the Other. A Surgeon should be well acquainted
with plain Anatomy, that is, the Muscular part, their Place and Situation,
when Relaxed or Contracted. He should understand the Functions of every Joint
and the whole of what is called the Animal Economy. He has a Sight from
the Digestion of the Food, its Passage to the stomach, its Stay there, the For-
mation of Part of it into Chyle, the Excretion of the Bile, and the Conversion of
the Food into Lymph, to the Extension of it to the Lungs, without which he cannot
have a competent Knowledge of Surgery. This understanding will take up some
Time, it will be at first Difficult, but it is easily attained by a little close
Application and Perseverance. A Surgeon should not only know Anatomy
it should have a competent Knowledge of Physics, and what he well ac-
quainted with the Virtues and Quality of Medicines, as in the Country he
cannot always have the assistance of a Physician, he must be able to call in a Physician
A competent Practice in the last state will have many Symptoms
with Inflammation attending it, which will require Medical Assistance. In
the last state of it will also, from its dangerous symptoms require Support and
Careful Treatment. Surgery therefore merits not only placing the
hand in an advantageous Position, or Dressing it, or Learning it
with the greatest Diligence and Purity, this will not suffice the Patient's
condition.

another principal Complaint. The only I take for the Discharge of
I shall as by saying on Diabets and so He must have a great
Assistance. I therefore believe you will be well acquainted with the Means of
Removing these Complaints, or you will find yourself greatly Enamoured
and more than that Reputation is but ever Distinguishes a good Surgeon
Anatomy and Physiology are absolutely necessary to make good Surgeon
to these should be added natural Philosophy; I am glad therefore to find
Part of your Studies, as that will point out to you the various Beauties
attending this Science, greatly affects the natural Genies, and explains
to us the many Deviations Nature sometimes falls into. To these must be
added a Temper steady and Resolute, Patient in Enquiry, and not misled
by Prejudice, nor to be led by the first Appearances which is necessary
The Physician should by no means lose his Humanity, He should
make a Distinction between the Senseless Dead, and the Senseless
Extreme inevitable Pains of miserable Unhappy, but feeling Patient
Even the French Surgeons give a Priority in their Operations. The
Cutting of their Tracing the Sympathetic Cord four or six up in the Abdomen
for the relief of the Stone and Wards could suppose that they
are able to do so on a senseless Body, or if otherwise, they were better
than a Patient, for the Attempt. How they do this cannot be conceived by
a Rational Surgeon. Could they do this on a matter of Fact, I
should have been less surprised. I cannot believe that this ever has been
performed but on the Dead Body. When the Surgeon comes to practice on
the living Patient and is often called upon, he must be able to give
a Definition of the Stone and Wards. His Eye is as his Hand
is his Hand may if defective be principally owing to the want of

and I anticipate, that for it is a more difficult thing to live a
temperate life - The Temper should be mild and Engaging; The manner
ought to be to frighten the Timorous Patient. But on the operating Part
I am without Doubt, which is always to be recommended; and for a farther
recital of these Accomplishments and necessary Qualifications belonging to a
Surgeon, I will refer you to that useful Writer who has fully treated on
it that Physician will always be the best Practitioner who has always
the edge of Surgery, and likewise the Surgeon who is acquainted
with the Use and Quality of Medicine. Writers of Surgery may be divided
into two Classes those of general Systems and those of particular Diseases, the
former have not Time enough to fill up minute Diseases, they do every little more
than give the Rules and Copy from another; the latter you should read more
thoroughly and pay always more respect to Writers of particular Diseases, and
at the same time pay respect to yourself, and let your own Judgment be ac-
companied with his System, comparing it with what your Observation and
Practice show you, and then let us say. Surgery has within this
fifty years been improved very much, but let us be exact to your Study
and tend rather to excite you to a still higher Spirit and Study to further
improvement for as much as you know, and a success will be soon to
be obtained and improved, as we are all our predecessors. A very useful Sur-
geon is to be a true friend from his Skill and his Patient and Ignorant
Doctors. This was the present Lateral Operation for the Stone, invented by an
Irish Surgeon a person of no Education, therefore Knowledge may come from
any source as well as the learned, and indeed most of the useful Discoveries
both in Surgery and Surgery have been effected by Ignorance and Chance -
The remedy applied to the treatment of the Stone was what it was a few
years ago. - I would always stand in as a Medium between the ancient Practice

of Religion well meaning Practitioners and the too oft variable Practice of
nor never listen too readily to any sudden new fangled Practice, before you
have thoroughly considered it. — In respect to your Studies, I
have your Reading with your Observations, ^{that} you may be able to find Discrepancies
and Differences, which you may Regulate in your Notes. The frequent
Dissection of Dead Bodies is absolutely necessary, to know the Situation &
Uses of Parts and how constructed, &c. This will give you about —
the sole use of your Hands, in respect to the Operative part of Surgery. Views
cannot be obtained but by Dissection. — In performing an Operation, always
consider you have a Body before you, Endued with the greatest Sensibility
and Feeling, give therefore the least possible pain imaginable; be not too
Quick, nor slow to show your Dexterity. By doing what you may call
which is not to cut, but to divide, divide & divide, and let the
general Rule with you. If it is well done, 'tis soon done. I have more
only to add, that if I shall give you any Knowledge in these Lectures, which
is my Intention so to do, you will obligingly improve it by Study and
Application, and then to Practice as an honest and skilful Surgeon.
